First draft for IG consolidation project	December 29, 2010	Dave Carlson	

Notes on draft status

December 29, 2010: This is a first draft of HITSP/IHE/HL7 implementation guide consolidation for C32 and CCD. This draft includes all template sections defined in C83, some of which are not part of C32 summaries. The next draft will limit content to templates used in C32.

Chapter 1

INTRODUCTION

Topics:

- *Overview*
- *Approach*
- *Scope*
- *Audience*
- *Organization of This Guide*
- *Use of Templates*
- *Conventions Used in This Guide*

Overview

This implementation guide is generated from UML models developed in the Open Health Tools (OHT) Model-Driven Health Tools (MDHT) project. The HITSP specifications have been formalized into computational models expressed in UML. These models are used by automated tooling to generate this publication, plus validation tools and Java libraries for implementers.

This document combines specifications from several HITSP documents, as summarized in the following sections. For the authoritative source, please refer to the approved specifications from HITSP.

C32 Patient Summary

The HITSP Summary Documents Using HL7 Continuity of Care Document (CCD) Component describes the document content summarizing a consumer's medical status for the purpose of information exchange. The content may include administrative (e.g., registration, demographics, insurance, etc.) and clinical (problem list, medication list, allergies, test results, etc) information. Any specific use of this Component by another HITSP specification may constrain the content further based upon the requirements and context of the document exchange. This specification defines content in order to promote interoperability between participating systems. Any given system creating or consuming the document may contain much more information than conveyed by this specification. Such systems may include Personal Health Record Systems (.1.s), Electronic Health Record Systems (EHRs), Practice Management Applications and other persons and systems as identified and permitted.

This Component is essentially a subset of the healthcare data that has been developed for specific business Use Cases. This subset contains the minimum critical or pertinent medical information sections as specified by the business case. Information conveyed according to the Component Construct is a representative extract of the information available on the creating system. The information in the HITSP Summary Documents Using HL7 Continuity of Care Document (CCD) Component and the creating systems must be consistent. Furthermore there should be no data elsewhere in the creating system that would contradict the meaning of any data in this construct. The expectation is that consuming systems will be able to use this specification as a source of information to input and/or update information in their instantiation of the healthcare record. This specification does not define the policies applicable to the import of this information.

It is anticipated and desirable that some implementers of the HITSP Summary Documents Using HL7 Continuity of Care Document (CCD) Component will want to add data and sections to permit greater communication between systems. The underlying standards (primarily HL7 CCD – Continuity of Care Document) have additional modules that may serve such purposes. This practice is beyond the scope of this HITSP Component. Implementers should be aware that they must assume that receivers of the document may only be able to view or process content modules as described in this specification, and may not be able to use the additional modules in the document. This means that the HITSP Summary Documents Using HL7 Continuity of Care Document (CCD) Component must be able to stand-alone. Applications may wish to display the document in two different user-selected views, one of which is restricted to the minimal dataset contents of this component. Adding optional sections and data elements should not generate errors. Optional data should be used if understood by the receiving system, but must not change the meaning of the document.

This Component refers to the HITSP 2008 work cycle. It expands upon the prior version of the specification for a consumer's registration/medication history information to include content to support the consumer's access to clinical information, medication management activities and supportive information for quality of care assessment.

C83 Content Modules

The purpose of the Healthcare Information Technology Standards Panel (HITSP) CDA Content Modules Component is to define the library of Components that may be used by CDA-based constructs developed by HITSP and others in standards based exchanges. The Components are organized into modules to simplify navigation. These modules are organized along the same principals as the HL7 Continuity of Care Document.

The data elements found in these modules are based on HL7 CDA Implementation Guides and the IHE PCC Technical Framework Volume II, Release 5 and its related supplements. These guides contain specifications for document sections that are consistent with all clinical documents currently selected for HITSP constructs.

C80 Clinical Document and Message Terminology

The purpose of the Health Information Technology Standards Panel (HITSP) Clinical Document and Message Terminology Component is to define the vocabulary for either document-based or message-based HITSP constructs such as Clinical Document Architecture (CDA) documents, HL7 V2 messages, etc. For more in-depth information about how this Component relates to other HITSP constructs, see HITSP/TN901 Clinical Documents.

Approach

Working with an initial portion of the data provides the opportunity to work with the data from the perspective of the underlying model and electronic format and to explore many design issues thoroughly. Taking this as an initial step ensures that the data set developers and standards community can reach consensus prior to the larger commitment of time that would be required to bring the full data set into standard format.

This project supports reusability and ease of data collection through a standard data representation harmonized with work developed through Health Information Technology Expert Panel (HITEP), balloted through Health Level Seven (HL7) and/or recognized by the Health Information Technology Standards Panel (HITSP).

This implementation guide (IG) specifies a standard for electronic submission of NCRs in a Clinical Document Architecture (CDA), Release 2 format.

Scope

TODO: scope of this implementation guide.

Audience

The audience for this document includes software developers and implementers who wish to develop...

Organization of This Guide

The requirements as laid out in the body of this document are subject to change per the policy on implementation guides (see section 13.02" Draft Standard for Trial Use Documents" within the HL7 Governance and Operations Manual, http://www.hl7.org/documentcenter/public/membership/HL7_Governance_and_Operations_Manual.pdf).

Templates

Templates are organized by document (see Document Templates), by section (see Section Templates), and by clinical statements (see Clinical Statement Templates). Within a section, templates are arranged hierarchically, where a more specific template is nested under the more generic template that it conforms to. See Templates by Containment for a listing of the higher level templates by containment; the appendix Templates Used in This Guide includes a table of all of the templates Organized Hierarchically.

Vocabulary and Value Sets

Vocabularies recommended in this guide are from standard vocabularies. When SNOMED codes are used, rules defined in Using SNOMED CT in HL7 Version 3 are adhered to. In many cases, these vocabularies are further constrained into value sets for use within this guide. Value set names and OIDs are summarized in the table Summary of Value Sets. Each named value set in this summary table is stored in a template database that will be maintained by CHCA.

Use of Templates

When valued in an instance, the template identifier (`templateId`) signals the imposition of a set of template-defined constraints. The value of this attribute provides a unique identifier for the templates in question.

Originator Responsibilities

An originator can apply a `templateId` to assert conformance with a particular template.

In the most general forms of CDA exchange, an originator need not apply a `templateId` for every template that an object in an instance document conforms to. This implementation guide asserts when `templateIds` are required for conformance.

Recipient Responsibilities

A recipient may reject an instance that does not contain a particular `templateId` (e.g., a recipient looking to receive only CCD documents can reject an instance without the appropriate `templateId`).

A recipient may process objects in an instance document that do not contain a `templateId` (e.g., a recipient can process entries that contain Observation acts within a Problems section, even if the entries do not have `templateIds`).

Conventions Used in This Guide

Conformance Requirements

Conformance statements are grouped and identified by the name of the template, along with the `templateId` and the context of the template (e.g., ClinicalDocument, section, observation), which specifies the element under constraint. If a template is a specialization of another template, its first constraint indicates the more general template. In all cases where a more specific template conforms to a more general template, asserting the more specific template also implies conformance to the more general template. An example is shown below.

Template name

```
[<type of template>: templateId <XXXX.XX.XXX.XXX>]
```

Description of the template will be here

1. Conforms to <The template name> Template (templateId: XXXX<XX>XXX>YYY).
2. **SHALL** contain [1..1] @classCode = <AAA> <code display name> (CodeSystem: 123.456.789 <XXX> Class) **STATIC** (CONF:<number>).
3.

Figure 1: Template name and "conforms to" appearance

The conformance verb keyword at the start of a constraint (**SHALL** , **SHOULD** , **MAY** , etc.) indicates business conformance, whereas the cardinality indicator (0..1, 1..1, 1..*, etc.) specifies the allowable occurrences within an instance. Thus, " **MAY** contain 0..1" and " **SHOULD** contain 0..1" both allow for a document to omit the particular component, but the latter is a stronger recommendation that the component be included if it is known.

The following cardinality indicators may be interpreted as follows:

- 0..1 as zero to one present
- 1..1 as one and only one present
- 2..2 as two must be present
- 1..* as one or more present
- 0..* as zero to many present

Value set bindings adhere to HL7 Vocabulary Working Group best practices, and include both a conformance verb (**SHALL**, **SHOULD**, **MAY**, etc.) and an indication of **DYNAMIC** vs. **STATIC** binding. The use of **SHALL** requires that the component be valued with a member from the cited value set; however, in every case any HL7 "null" value such as other (OTH) or unknown (UNK) may be used.

Each constraint is uniquely identified (e.g., "CONF:605") by an identifier placed at or near the end of the constraint. These identifiers are not sequential as they are based on the order of creation of the constraint.

1. **SHALL** contain [1..1] component/structuredBody (CONF:4082).
 - a. This component/structuredBody **SHOULD** contain [0..1] component (CONF:4130) such that it
 - a. **SHALL** contain [1..1] Reporting Parameters section (templateId:2.16.840.1.113883.10.20.17.2.1) (CONF:4131).
 - b. This component/structuredBody **SHALL** contain [1..1] component (CONF:4132) such that it
 - a. **SHALL** contain [1..1] Patient data section - NCR (templateId:2.16.840.1.113883.10.20.17.2.5) (CONF:4133).

Figure 2: Template-based conformance statements example

CCD templates are included within this implementation guide for ease of reference. CCD templates contained within this implementation guide are formatted WITHOUT typical **KEYWORD** and **XML** element styles. A WIKI site is available if you would like to make a comment to be considered for the next release of CCD: http://wiki.hl7.org/index.php?title=CCD_Suggested_Enhancements The user name and password are: wiki/wikiwiki. You will need to create an account to edit the page and add your suggestion.

1. The value for "Observation / @moodCode" in a problem observation SHALL be "EVN" 2.16.840.1.113883.5.1001 ActMood STATIC. (CONF: 814).
2. A problem observation SHALL include exactly one Observation / statusCode. (CONF: 815).
3. The value for "Observation / statusCode" in a problem observation SHALL be "completed" 2.16.840.1.113883.5.14 ActStatus STATIC. (CONF: 816).
4. A problem observation SHOULD contain exactly one Observation / effectiveTime, to indicate the biological timing of condition (e.g. the time the condition started, the onset of the illness or symptom, the duration of a condition). (CONF: 817).

Figure 3: CCD conformance statements example

Keywords

The keywords SHALL, SHALL NOT, SHOULD, SHOULD NOT, MAY, and NEED NOT in this document are to be interpreted as described in the [HL7 Version 3 Publishing Facilitator's Guide](#):

- **SHALL**: an absolute requirement
- **SHALL NOT**: an absolute prohibition against inclusion
- **SHOULD/SHOULD NOT**: valid reasons to include or ignore a particular item, but must be understood and carefully weighed
- **MAY/NEED NOT**: truly optional; can be included or omitted as the author decides with no implications

XML Examples

XML samples appear in various figures in this document in a fixed-width font. Portions of the XML content may be omitted from the content for brevity, marked by an ellipsis (...) as shown in the example below.

```
<ClinicalDocument xmlns='urn:hl7-org:v3'>
...
</ClinicalDocument>
```

Figure 4: ClinicalDocument example

XPath expressions are used in the narrative and conformance requirements to identify elements because they are familiar to many XML implementers.

Chapter

2

DOCUMENT TEMPLATES

Topics:

- [Patient Summary](#)
- [Unstructured Document](#)

This section contains the document level constraints for CDA documents that are compliant with this implementation guide.

Patient Summary

[ClinicalDocument: templateId 2.16.840.1.113883.3.88.11.32.1]

This Component describes the document content that summarizes a consumer's medical status for the purpose of health information exchange. While an EHR or PHR system can contain much more information, this Component only deals with the summary information to be exchanged between such systems as established as requirements described in AHIC Use Cases.

1. Conforms to *CCD Continuity Of Care Document* template (templateId: 2.16.840.1.113883.10.20.1)
2. Conforms to *CDA Clinical Document*
3. Conforms to *CDT General Header Constraints* template (templateId: 2.16.840.1.113883.10.20.3)
4. Conforms to *IHE Medical Document* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.1.1)
5. [CCD] **SHOULD** contain [0..1] component, such that it
 - a. contains *CCD Problem Section* (templateId: 2.16.840.1.113883.10.20.1.11)
6. [CCD] **SHOULD** contain [0..1] component, such that it
 - a. contains *CCD Family History Section* (templateId: 2.16.840.1.113883.10.20.1.4)
7. [CCD] **SHOULD** contain [0..1] component, such that it
 - a. contains *CCD Social History Section* (templateId: 2.16.840.1.113883.10.20.1.15)
8. [CCD] **SHOULD** contain [0..1] component, such that it
 - a. contains *CCD Alerts Section* (templateId: 2.16.840.1.113883.10.20.1.2)
9. [HITSP] **C32-[CT1-11]: MAY** contain [0..1] component, such that it
 - a. contains *Medications Section* (templateId: 2.16.840.1.113883.3.88.11.83.112)
10. [CCD] **CONF-388: SHOULD** contain [1..1] component, such that it
 - a. contains *CCD Results Section* (templateId: 2.16.840.1.113883.10.20.1.14)
11. [CCD] **SHOULD** contain [0..1] component, such that it
 - a. contains *CCD Procedures Section* (templateId: 2.16.840.1.113883.10.20.1.12)
12. [HITSP] **C32-[CT1-5]: MAY** contain [0..1] component, such that it
 - a. contains *Encounters Section* (templateId: 2.16.840.1.113883.3.88.11.83.127)
13. [HITSP] **C32-[CT1-13]: MAY** contain [0..1] component, such that it
 - a. contains *Plan Of Care Section* (templateId: 2.16.840.1.113883.3.88.11.83.124)
14. [HITSP] **C32-[CT1-7]: MAY** contain [0..1] component, such that it
 - a. contains *Immunizations Section* (templateId: 2.16.840.1.113883.3.88.11.83.117)
15. [HITSP] **C32-[CT1-17]: MAY** contain [0..1] component, such that it
 - a. contains *Vital Signs Section* (templateId: 2.16.840.1.113883.3.88.11.83.119)
16. [CCD] **SHOULD** contain [0..1] component, such that it
 - a. contains *CCD Medical Equipment Section* (templateId: 2.16.840.1.113883.10.20.1.7)
17. [CCD] **SHOULD** contain [0..1] component, such that it
 - a. contains *CCD Functional Status Section* (templateId: 2.16.840.1.113883.10.20.1.5)
18. [HITSP] **C32-[CT1-1]: MAY** contain [0..1] component, such that it
 - a. contains *Advance Directives Section* (templateId: 2.16.840.1.113883.3.88.11.83.116)
19. [HITSP] **C32-[CT1-9]: MAY** contain [0..1] component, such that it
 - a. contains *Payers Section* (templateId: 2.16.840.1.113883.3.88.11.83.101)
20. [CDT] **CONF-HP-21: SHALL** contain [1..1] code
 - Specifies the type of the clinical document.

21. [CDT] **CONF-HP-24: SHALL** contain [1..1] `languageCode`
22. [CCD] **CONF-15: MAY** contain [0..1] `component`, such that it
- a. contains *CCD Purpose Section* (templateId: 2.16.840.1.113883.10.20.1.13)
23. [CDT] **CONF-HP-17: SHALL** contain [1..1] `id`
- The ClinicalDocument/id element is an instance identifier data type (see HL7 Version 3 Abstract Data in Section 5 REFERENCES). The root attribute is a UUID or OID. The root uniquely identifies the scope of the extension. The root and extension attributes uniquely identify the document.
24. [CDT] **CONF-HP-23: SHALL** contain [1..1] `effectiveTime`
- Specifies the creation time of the document. All documents authored by direct input to a computer system should record an effectiveTime that is precise to the second. When authored in other ways, for example, by filling out a paper form that is then transferred into an EHR system, the precision of effectiveTime may be less than to the second.
25. [CDT] Contains [1..1] `confidentialityCode`
- Specifies the confidentiality assigned to the document. This specification provides no further guidance beyond CDA R2 on documents with respect to the vocabulary used for confidentialityCode, nor treatment or implementation of confidentiality.
26. [CDT] Contains [1..*] `author`, such that it
- a. contains *CDA Author*
 - The author element represents the creator of the clinical document. If the role of the actor is the entry of information from his or her own knowledge or application of skills, that actor is the author. If one actor provides information to another actor who filters, reasons, or algorithmically creates new information, then that second actor is also an author, having created information from his or her own knowledge or skills. However, that determination is independent from the determination of the first actor's authorship.
27. [CDT] Contains [1..1] `custodian`, such that it
- a. contains *CDA Custodian*
 - Based on the CDA R2 constraints (Section 4.2.2.3 of the CDA Normative Web Edition. See Section 5 REFERENCES), the custodian element is required and is the custodian of the clinical document.
28. [CDA] Contains [1..1] `component`, where its type is *CDA Component2*
29. [CDT] **CONF-HP-15: SHALL** contain [1..1] `realmCode/@code = "US"`
30. [CDT] **CONF-HP-22: SHALL** contain [1..1] `title`
- Specifies the local name used for the document. Note that the title does not need to be the same as the display name provided with the document type code. For example, the display name provided by LOINC® as an aid in debugging may be "HISTORY AND PHYSICAL." The title can be localized, as appropriate.
31. [CDT] **CONF-HP-16: SHALL** contain [1..1] `typeId`
- The clinical document type ID identifies the constraints imposed by CDA R2 on the content, essentially acting as a version identifier.
32. [CDT] Contains [0..1] `dataEnterer`, such that it
- a. contains *CDA Data Enterer*
 - The dataEnterer element represents the person who transferred the information from other sources into the clinical document, where the other sources wrote the content of the note. The guiding rule of thumb is that an author provides the content found within the header or body of the document, subject to their own interpretation. The dataEnterer adds information to the electronic system. A person can participate as both author and dataEnterer.
- If the role of the actor is to transfer information from one source to another (e.g., transcription or transfer from paper form to electronic system), that actor is considered a dataEnterer.
33. [CDT] Contains [0..*] `informationRecipient`, such that it
- a. contains *CDA Information Recipient*

- `informationRecipient`, when used in the context of a referral or request for consultation, this records the intended recipient of the information at the time the document is created. The intended recipient may also be the health chart of the patient, in which case the `receivedOrganization` is the scoping organization of that chart.

34. [CDT] Contains [0..1] `legalAuthenticator`, such that it

- a. contains *CDA Legal Authenticator*

- The `legalAuthenticator` element identifies the legal authenticator of the document and must be present if the document has been legally authenticated. Based on local practice, clinical documents may be released before legal authentication. This implies that a clinical document that does not contain this element has not been legally authenticated.

The act of legal authentication requires a certain privilege be granted to the legal authenticator depending upon local policy. All clinical documents have the potential for legal authentication, given the appropriate credentials.

Local policies may choose to delegate the function of legal authentication to a device or system that generates the clinical document. In these cases, the legal authenticator is a person accepting responsibility for the document, not the generating device or system.

35. [CDT] Contains [0..*] `authenticator`, such that it

- a. contains *CDA Authenticator*

- The `authenticator` identifies the participant who attested to the accuracy of the information in the document.

Automated systems, such as a PHR, that allow a clinical document to be generated need to give special consideration to authentication permissions because the information contained in the document may come from sources or contain information that the author cannot validate.

36. [HITSP] C32-[CT1-2]: MAY contain [0..1] component, such that it

- a. contains *Allergies Reactions Section* (templateId: 2.16.840.1.113883.3.88.11.83.102)

37. [HITSP] C32-[CT1-3]: MAY contain [0..*] component, such that it

- a. contains *Comment* (templateId: 2.16.840.1.113883.3.88.11.83.11)

38. [HITSP] C32-[CT1-4]: MAY contain [0..1] component, such that it

- a. contains *Problem List Section* (templateId: 2.16.840.1.113883.3.88.11.83.103)

39. [HITSP] C32-[CT1-14]: MAY contain [0..1] component, such that it

- a. contains *IHE Pregnancy History Section* (templateId: 1.3.6.1.4.1.19376.1.5.3.1.1.5.3.4)

40. [HITSP] C32-[CT1-15]: MAY contain [0..1] component, such that it

- a. contains *Surgeries Section* (templateId: 2.16.840.1.113883.3.88.11.83.108)

41. [HITSP] C32-[CT1-16]: SHOULD contain [1..*] `supportHeaders`, such that it

- a. contains *Support*

42. [HITSP] C32-[CT1-18]: MAY contain [0..1] component, such that it

- a. contains *Diagnostic Results Section* (templateId: 2.16.840.1.113883.3.88.11.83.122)

43. [CCD] CONF-2: SHALL satisfy: Contains exactly one `documentationOf / serviceEvent`

- [OCL]: `self.documentationOf->one(doc : cda::DocumentationOf | not doc.serviceEvent.oclIsUndefined())`

44. [CCD] CONF-3: SHALL satisfy: `documentationOf / serviceEvent / @classCode` SHALL be 'PCPR'

- [OCL]: `self.documentationOf->one(doc : cda::DocumentationOf | doc.serviceEvent.classCode = vocab::ActClassRoot::PCPR)`

45. [CCD] CONF-4: SHALL satisfy: `documentationOf / serviceEvent` contains exactly one `serviceEvent / effectiveTime / low` and exactly one `serviceEvent / effectiveTime / high`

- [OCL]: `self.documentationOf->one(doc : cda::DocumentationOf | not doc.serviceEvent.effectiveTime.low.oclIsUndefined() and not doc.serviceEvent.effectiveTime.high.oclIsUndefined())`

46. [CCD] **CONF-6: SHALL** satisfy: languageCode has the form nn, or nn-CC. The nn portion SHALL be an ISO-639-1 language code in lower case. The CC portion, if present, SHALL be an ISO-3166 country code in upper case

47. [CCD] **CONF-8: SHALL** satisfy: SHALL NOT contain templateId / @extension

- [OCL]: `self.templateId->forall(id : datatypes::II | id.root = '2.16.840.1.113883.10.20.1' implies id.extension.ocIsUndefined())`

48. [CCD] **CONF-9: SHALL** satisfy: effectiveTime is expressed with precision to include seconds

49. [CCD] **CONF-10: SHALL** satisfy: effectiveTime includes an explicit time zone offset

50. [CCD] **CONF-11: SHALL** satisfy: Contains one or two recordTarget

- [OCL]: `self.recordTarget->size() = 1 or self.recordTarget->size() = 2`

51. [CCD] **CONF-12: SHOULD** satisfy: Contains one or more author / assignedAuthor / assignedPerson and/or author / assignedAuthor / representedOrganization

- [OCL]: `self.author->exists(author : cda::Author | not author.assignedAuthor.assignedPerson.ocIsUndefined() or not author.assignedAuthor.representedOrganization.ocIsUndefined())`

52. [CCD] **CONF-13: SHALL** satisfy: If author has an associated representedOrganization with no assignedPerson or assignedAuthoringDevice, then the value for author / assignedAuthor / id / @NullFlavor SHALL be 'NA'

- [OCL]: `self.author->exists(author : cda::Author | (not author.assignedAuthor.representedOrganization.ocIsUndefined() and author.assignedAuthor.assignedPerson.ocIsUndefined() and author.assignedAuthor.assignedAuthoringDevice.ocIsUndefined()) implies author.assignedAuthor.id->one(id : datatypes::II | id.nullFlavor = vocab::NullFlavor::NA))`

53. [CCD] **CONF-14: MAY** satisfy: Contains one or more informationRecipient

- [OCL]: `self.informationRecipient->size() > 0`

54. [CCD] **CONF-28: MAY** satisfy: The value for component / structuredBody / component / section / entry / @typeCode MAY be 'DRIV' "is derived from" 2.16.840.1.113883.5.1002 ActRelationshipType STATIC, to indicate that the CDA Narrative Block is fully derived from the structured entries.

55. [CCD] **CONF-29: SHOULD** satisfy: A CCD entry SHOULD explicitly reference its corresponding narrative (using the approach defined in CDA Release 2, section 4.3.5.1 <content>).

56. [CDT] **CONF-HP-6: SHALL** satisfy: All patient, guardianPerson, assignedPerson, maintainingPerson, relatedPerson, intendedRecipient/informationRecipient, associatedPerson, and relatedSubject/subject elements have a name.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `*[self::cda:patient or self::cda:guardianPerson or self::cda:assignedPerson or self::cda:maintainingPerson or self::cda:relatedPerson or self::cda:associatedPerson or self::cda:intendedRecipient/cda:informationRecipient or self::cda:relatedSubject/cda:subject]`

57. [CDT] **CONF-HP-7: SHALL** satisfy: All patientRole, assignedAuthor, assignedEntity[not(parent::dataEnterer)] and associatedEntity elements have an addr and telecom element.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `*[self::cda:patientRole or self::cda:assignedAuthor or self::cda:assignedEntity[not(parent::cda:dataEnterer)] or self::cda:associatedEntity]`

58. [CDT] **CONF-HP-8: SHOULD** satisfy: All guardian, dataEnterer/assignedEntity, relatedEntity, intendedRecipient, relatedSubject and participantRole elements have an addr and telecom element.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `*[self::cda:guardian or self::cda:assignedEntity[parent::cda:dataEnterer] or self::cda:relatedEntity or self::cda:intendedRecipient or self::cda:relatedSubject or self::cda:participantRole]`

59. [CDT] CONF-HP-9: SHALL satisfy: All guardianOrganization, providerOrganization, wholeOrganization, representedOrganization, representedCustodianOrganization, receivedOrganization, scopingOrganization and serviceProviderOrganization elements have name, addr and telecom elements.

- When name, address, or telecom information is unknown and where these elements are required to be present, as with CDA conformance if the information is unknown, these elements will be represented using an appropriate value for the nullFlavor attribute on the element. Legal values according to this specification come from the HL7 NullFlavor vocabulary.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: *[self::cda:guardianOrganization or self::cda:providerOrganization or self::cda:wholeOrganization or self::cda:representedOrganization or self::cda:representedCustodianOrganization or self::cda:receivedOrganization or self::cda:scopingOrganization or self::cda:serviceProviderOrganization]

60. [CDT] CONF-HP-10: SHALL satisfy: Times or time intervals found in the ClinicalDocument/effectiveTime, author/time, dataEnterer/time, legalAuthenticator/time, authenticator/time and encompassingEncounter/effectiveTime elements SHALL be precise to the day, SHALL include a time zone if more precise than to the day, and SHOULD be precise to the second.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: /cda:ClinicalDocument/cda:effectiveTime | //cda:author/cda:time | //cda:dataEnterer/cda:time | //cda:encompassingEncounter/cda:effectiveTime

61. [CDT] CONF-HP-11: SHALL satisfy: Times or time intervals found in the asOrganizationPartOf/effectiveTime, asMaintainedEntity/effectiveTime, relatedEntity/effectiveTime, serviceEvent/effectiveTime, ClinicalDocument/participant/time, serviceEvent/performer/time and encounterParticipant/time SHALL be precise at least to the year, SHOULD be precise to the day, and MAY omit time zone.

- [OCL]: cda::OrganizationPartOf.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject)->union(cda::MaintainedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::ServiceEvent.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::EncounterParticipant.allInstances()->select(time.ocIsUndefined()).oclAsType(ecore::EObject))->union(self.participant->select(time.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::OrganizationPartOf.allInstances().effectiveTime->union(cda::MaintainedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::ServiceEvent.allInstances().effectiveTime->union(cda::EncounterParticipant.allInstances().time)->union(self.participant.time)->select(current : datatypes::IVL_TS | ((not current.low.ocIsUndefined()) and (current.low.value.ocIsUndefined() or current.low.value.size() < 4)) or ((not current.center.ocIsUndefined()) and (current.center.value.ocIsUndefined() or current.center.value.size() < 4)) or ((not current.high.ocIsUndefined()) and (current.high.value.ocIsUndefined() or current.high.value.size() < 4)) or (current.low.ocIsUndefined() and current.center.ocIsUndefined() and current.high.ocIsUndefined())).oclAsType(ecore::EObject))

62. [CDT] CONF-HP-12: SHALL satisfy: Telephone numbers match the regular expression pattern `tel:\+?[0-9().]+`

- The telecom element is used to provide a contact telephone number for the various participants that require it. The value attribute of this element is a URL that specifies the telephone number, as indicated by the TEL data type.
- All telephone numbers are to be encoded using a restricted form of the tel: URL scheme. A telephone number used for voice calls begins with the URL scheme tel:. If the number is a global phone number, it starts with a plus (+) sign. The remaining number is made up of the dialing digits and an optional extension and may also contain visual separators.
- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `//*[self::cda:telecom]`

63. [CDT] CONF-HP-13: SHALL satisfy: At least one dialing digit is present in the phone number after visual separators are removed.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `//*[self::cda:telecom]`

64. [CDT] CONF-HP-14: SHALL satisfy: If the telephone number is unknown it is represented using the appropriate flavor of null.

- There is no way to distinguish between an unknown phone number and an unknown e-mail or other telecommunications address. Therefore, the following convention will be used: Any telecom element that uses a flavor of null (has a nullFlavor attribute) is assumed to be a telephone number, which is the only required telecommunications address element within this DSTU.
- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `//*[self::cda:telecom]`

65. [CDT] CONF-HP-16: SHALL satisfy: The extension attribute of the typeId element is POCD_HD000040.

- [OCL]: `self.typeId.extension = 'POCD_HD000040'`

66. [CDT] CONF-HP-17: SHALL satisfy: The id/@root attribute is a syntactically correct UUID or OID.

67. [CDT] CONF-HP-18: SHALL satisfy: UUIDs are represented in the form XXXXXXXX-XXXX-XXXX-XXXXXXXXXXXXXXXX, where each X is a character from the set [A-Fa-f0-9].

68. [CDT] CONF-HP-19: SHALL satisfy: OIDs are represented in dotted decimal notation, where each decimal number is either 0, or starts with a nonzero digit. More formally, an OID SHALL be in the form $([0-2])(.[1-9][0-9]^*(0))^+$.

- Organizations that wish to use OIDs should properly register their OID root and ensure uniqueness of the OID roots used in identifiers. A large number of mechanisms exist for obtaining OID roots for free or for a reasonable fee. HL7 maintains an OID registry page from which organizations may request an OID root under the HL7 OID root. This page can be accessed at: <http://www.hl7.org/oid>.

Another useful resource lists the many ways to obtain a registered OID Root for free or a small fee anywhere in the world and is located at: <http://www.dclunie.com/medical-image-faq/html/part8.html#UIDRegistration>.

The manner in which the OID root is obtained is not constrained by this DSTU.

69. [CDT] CONF-HP-20: SHALL satisfy: OIDs are no more than 64 characters in length.

- OIDs are limited by this specification to no more than 64 characters in length for compatibility with other standards and Implementation Guides.
- [OCL]: `self.id->select((not id.root.ocIsUndefined()) and id.root.size() > 64)`

70. [CDT] CONF-HP-25: SHALL satisfy: languageCode has the form nn, or nn-CC.

71. [CDT] CONF-HP-26: SHALL satisfy: The nn portion of languageCode is a legal ISO-639-1 language code in lowercase.

72. [CDT] CONF-HP-27: SHALL satisfy: The CC portion languageCode, if present, SHALL be an ISO-3166 country code in uppercase.

73. [CDT] CONF-HP-28: SHALL satisfy: Both setId and versionNumber SHALL be present or both SHALL be absent.

- The ClinicalDocument/setId element uses the instance identifier (II) data type. The root attribute is a UUID or OID that uniquely identifies the scope of the identifier, and the extension attribute is a value that is unique within the scope of the root for the set of versions of the document. See Document Identification, Revisions, and Addenda in Section 4.2.3.1 of the CDA Specification for some examples showing the use of the setId element.
 - [OCL]: (self.setId.ocIsUndefined() and self.versionNumber.ocIsUndefined()) xor (not self.setId.ocIsUndefined() and not self.versionNumber.ocIsUndefined())
- 74. [CDT] CONF-HP-29: SHALL** satisfy: The @extension and/or @root of setId and id SHALL be different when both are present.
- [OCL]: (not self.setId.ocIsUndefined() and not self.id.ocIsUndefined()) implies (self.setId.root <> self.id.root or self.setId.extension <> self.id.extension)
- 75. [CDT] CONF-HP-30: SHALL** satisfy: A copyTime element SHALL NOT be present.
- The ClinicalDocument/copyTime element has been deprecated in CDA R2.
 - [OCL]: self.copyTime.ocIsUndefined()
- 76. [CDT] CONF-HP-31: SHALL** satisfy: At least one recordTarget/patientRole element is present.
- [OCL]: self.recordTarget->size() > 0 and self.recordTarget->exists(target : cda::RecordTarget | not target.patientRole.ocIsUndefined())
- 77. [CDT] CONF-HP-32: SHALL** satisfy: A patient/birthTime element SHALL be present. The patient/birthTime element SHALL be precise at least to the year, and SHOULD be precise at least to the day, and MAY omit time zone. If unknown, it SHALL be represented using a flavor of null.
- [OCL]: self.recordTarget->forall(target : cda::RecordTarget | not target.patientRole.ocIsUndefined()) implies (not target.patientRole.patient.birthTime.value.ocIsUndefined() or not target.patientRole.patient.birthTime.nullFlavor.ocIsUndefined()))
- 78. [CDT] CONF-HP-33: SHALL** satisfy: A patient/administrativeGenderCode element SHALL be present. If unknown, it SHALL be represented using a flavor of null. Values for administrativeGenderCode SHOULD be drawn from the HL7 AdministrativeGender vocabulary.
- TODO: add OCL test for terminology
 - [OCL]: self.recordTarget->forall(target : cda::RecordTarget | not target.patientRole.ocIsUndefined()) implies (not target.patientRole.patient.administrativeGenderCode.code.ocIsUndefined() or not target.patientRole.patient.administrativeGenderCode.nullFlavor.ocIsUndefined()))
- 79. [CDT] CONF-HP-34: MAY** satisfy: The maritalStatusCode, religiousAffiliationCode, raceCode and ethnicGroupCode MAY be present. If maritalStatusCode, religiousAffiliationCode, raceCode and ethnicGroupCode elements are present, they SHOULD be encoded using the appropriate HL7 vocabularies.
- 80. [CDT] CONF-HP-35: SHOULD** satisfy: The guardian element is present when the patient is a minor child.
- 81. [CDT] CONF-HP-36: MAY** satisfy: The providerOrganization element is present.
- [OCL]: self.recordTarget->exists(target : cda::RecordTarget | not target.patientRole.providerOrganization.ocIsUndefined())
- 82. [CDT] CONF-HP-37: SHALL** satisfy: The author/time element is present.
- The author/time element represents the start time of the author's participation in the creation of the clinical document.
 - [OCL]: self.author->forall(author : cda::Author | not author.time.ocIsUndefined())

83. [CDT] **CONF-HP-38: SHALL** satisfy: The assignedAuthor/id element is present.

- [OCL]: `self.author->forall(author : cda::Author | author.assignedAuthor.id->size() > 0)`

84. [CDT] **CONF-HP-39: SHALL** satisfy: An assignedAuthor element contains at least one assignedPerson or assignedAuthoringDevice elements.

- [OCL]: `self.author->forall(author : cda::Author | not author.assignedAuthor.assignedPerson.ocIsUndefined() or not author.assignedAuthor.assignedAuthoringDevice.ocIsUndefined())`

85. [CDT] **CONF-HP-40: SHALL** satisfy: When dataEnterer is present, an assignedEntity/assignedPerson element is present.

- [OCL]: `not self.dataEnterer.ocIsUndefined() implies not self.dataEnterer.assignedEntity.assignedPerson.ocIsUndefined()`

86. [CDT] **CONF-HP-41: MAY** satisfy: The dataEnterer/time element MAY be present. If present, it represents the starting time of entry of the data.

- [OCL]: `not self.dataEnterer.ocIsUndefined() implies not self.dataEnterer.time.ocIsUndefined()`

87. [CDT] **CONF-HP-42: MAY** satisfy: The informant element is present.

- [OCL]: `self.informant->size() > 0`

88. [CDT] **CONF-HP-43: SHALL** satisfy: When informant is present, an assignedEntity/assignedPerson or relatedEntity/relatedPerson element SHALL be present.

- [OCL]: `self.informant->forall(i : cda::Informant12 | not i.assignedEntity.assignedPerson.ocIsUndefined() or not i.relatedEntity.relatedPerson.ocIsUndefined())`

89. [CDT] **CONF-HP-44: SHALL** satisfy: When the informant is a healthcare provider with an assigned role, the informant SHALL be represented using the assignedEntity element

- Assigned health care providers may be a source of information when a document is created. (e.g., a nurse's aide who provides information about a recent significant health care event that occurred within an acute care facility.) In these cases, the assignedEntity element is used.
- TODO: how to determine if informant is a healthcare provider? condition for implementing OCL

90. [CDT] **CONF-HP-45: SHALL** satisfy: Allowable values for informant/relatedEntity/@classCode SHALL be CON, PRS, CAREGIVER, AGNT or PROV from the RoleClass vocabulary.

- When the informant is a personal relation, that informant is represented in the relatedEntity element. The code element of the relatedEntity describes the relationship between the informant and the patient.

The relationship between the informant and the patient needs to be described to help the receiver of the clinical document understand the information in the document.

91. [CDT] **CONF-HP-46: SHALL** satisfy: When relatedEntity/@classCode is PRS, values in relatedEntity/code SHALL come from the HL7 PersonalRelationshipRoleType vocabulary or from SNOMED, any subtype of "Person in the family" (303071001).

92. [CDT] **CONF-HP-47: SHALL** satisfy: When an informant is an unrelated person not otherwise specified, the value relatedEntity/@classCode SHALL be set to CON to indicate that this person is a contact.

- Individuals with no prior personal relationship to the patient (e.g., a witness to a significant health care event) may provide information about the patient.

93. [CDT] **CONF-HP-48: SHALL** satisfy: When the informant is a healthcare provider without an assigned role, the informant SHALL be represented using the relatedEntity element and the value of relatedEntity/@classCode SHALL be set to PROV.

- A health care provider who does not have an assigned role at the institution may provide information. To record an informant that does not have an assigned role that can be represented within the context of the document, the information will be represented using the relatedEntity element and the value of relatedEntity/@classCode will be set to PROV.

94. [CDT] **CONF-HP-49: SHOULD** satisfy: When the informant is a healthcare provider, the value of relatedEntity/code SHOULD be present and indicate the type of healthcare provider.

95. [CDT] CONF-HP-50: MAY satisfy: The ClinicalDocument/informationRecipient element MAY be present. When informationRecipient is used, at least one informationRecipient/intendedRecipient/informationRecipient or informationRecipient/intendedRecipient/receivedOrganization SHALL be present.

96. [CDT] CONF-HP-51: SHALL satisfy: The assignedEntity/assignedPerson element SHALL be present in legalAuthenticator.

- [OCL]: not self.legalAuthenticator.ocIsUndefined() implies not self.legalAuthenticator.assignedEntity.assignedPerson.ocIsUndefined()

97. [CDT] CONF-HP-52: SHALL satisfy: The assignedEntity/assignedPerson element SHALL be present in an authenticator element.

- [OCL]: self.authenticator->forAll(auth : cda::Authenticator | auth.assignedEntity->forAll(entity : cda::AssignedEntity | not entity.assignedPerson.ocIsUndefined()))

98. [CDT] CONF-HP-10: SHOULD satisfy: Times or time intervals found in the ClinicalDocument/effectiveTime, author/time, dataEnterer/time, legalAuthenticator/time, authenticator/time and encompassingEncounter/effectiveTime elements SHALL be precise to the day, SHALL include a time zone if more precise than to the day, and SHOULD be precise to the second.

- Should portion of CON-HP-10 constrain

- [OCL]: -- implemented in Java using XPath selector

- [XPath]: /cda:ClinicalDocument/cda:effectiveTime | //cda:author/cda:time | //cda:dataEnterer/cda:time | //cda:encompassingEncounter/cda:effectiveTime

99. [CDT] CONF-HP-11: SHOULD satisfy: Times or time intervals found in the asOrganizationPartOf/effectiveTime, asMaintainedEntity/effectiveTime, relatedEntity/effectiveTime, serviceEvent/effectiveTime, ClinicalDocument/participant/time, serviceEvent/performer/time and encounterParticipant/time SHALL be precise at least to the year, SHOULD be precise to the day, and MAY omit time zone.

- Should portion of CON-HP-11 constrain

Figure 5: Patient Summary example

Unstructured Document

[ClinicalDocument: templateId 2.16.840.1.113883.3.88.11.62.1]

IMPORTANT NOTE: *The HITSP C62 specification does not include a templateId for this document type. The id 2.16.840.1.113883.3.88.11.62.1 is included in this model to support instance validation, but we are designing a solution to allow removal of this Id.*

1. Conforms to [CDT General Header Constraints](#) template (templateId: 2.16.840.1.113883.10.20.3)
2. Conforms to [IHE Medical Document](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.1.1)
3. Conforms to [CDA Clinical Document](#)
4. Conforms to [IHE Scanned Document](#) template (templateId: 1.3.6.1.4.1.19376.1.2.20)
5. [IHE] **SHALL** contain [1..1] code
 - Entered by operator or appropriately fixed for scanned content.
6. [IHE] **SHALL** contain [1..1] confidentialityCode
 - Assigned by the operator in accordance with the scanning facility policy. The notion or level of confidentiality in the header may not be the same as that in the Affinity Domain, but in certain cases could be used to derive a confidentiality value among those specified by the Affinity Domain. Attributes @code and @codeSystem shall be present.
7. [IHE] **SHALL** contain [1..1] effectiveTime
 - Denotes the time at which the original content was scanned. At a minimum, the time shall be precise to the day and shall include the time zone offset from GMT.
8. [IHE] **SHALL** contain [1..1] id
 - The root attribute shall contain the oid for the document, in which case the extension attribute shall be empty, or an oid that scopes the set of possible unique values for the extension attribute, in which case the extension shall be populated with a globally unique identifier within the scope of the root oid.
9. [IHE] **SHALL** contain [1..1] languageCode
 - Denotes the language used in the character data of the wrapper CDA header. If the scanned content, when rendered, is in a language different than that of the header, the language context of the CDA will be overwritten at the body level (see ITI TF-3: 5.2.3.9 ClinicalDocument/component/nonXMLBody for an example). Attribute @code shall be present.
10. [CDT] **CONF-HP-15: SHALL** contain [1..1] realmCode/@code = "US"
11. [IHE] **SHOULD** contain [1..1] title
 - Entered by operator, or possibly can be taken from the scanned content.
12. [IHE] **SHALL** contain [1..1] typeId
13. [CDA] Contains [1..*] author, where its type is [CDA Author](#)
14. [CDT] Contains [0..1] dataEnterer, such that it
 - a. contains [CDA Data Enterer](#)
 - The dataEnterer element represents the person who transferred the information from other sources into the clinical document, where the other sources wrote the content of the note. The guiding rule of thumb is that an author provides the content found within the header or body of the document, subject to their own interpretation. The dataEnterer adds information to the electronic system. A person can participate as both author and dataEnterer.

If the role of the actor is to transfer information from one source to another (e.g., transcription or transfer from paper form to electronic system), that actor is considered a dataEnterer.
15. [CDA] Contains [1..1] custodian, where its type is [CDA Custodian](#)
16. [CDT] Contains [0..*] informationRecipient, such that it

- a. contains *CDA Information Recipient*
 - informationRecipient, when used in the context of a referral or request for consultation, this records the intended recipient of the information at the time the document is created. The intended recipient may also be the health chart of the patient, in which case the receivedOrganization is the scoping organization of that chart.
17. [IHE] **MAY** contain [0..1] legalAuthenticator, such that it
- a. contains *CDA Legal Authenticator*
 - Context is left up to the scanning facility to refine in accordance with local policies.
18. [CDT] Contains [0..*] authenticator, such that it
- a. contains *CDA Authenticator*
 - The authenticator identifies the participant who attested to the accuracy of the information in the document.

Automated systems, such as a PHR, that allow a clinical document to be generated need to give special consideration to authentication permissions because the information contained in the document may come from sources or contain information that the author cannot validate.
19. [CDA] Contains [1..1] component, where its type is *CDA Component2*
20. [IHE] **SHOULD** contain [1..*] scanOriginalAuthor, such that it
- a. contains *IHE Scan Original Author* (templateId: 1.3.6.1.4.1.19376.1.2.20.1)
21. [IHE] **SHALL** contain [1..*] scanningDevice, such that it
- a. contains *IHE Scanning Device* (templateId: 1.3.6.1.4.1.19376.1.2.20.2)
22. [IHE] **SHALL** contain [1..1] scanDataEnterer, such that it
- a. contains *IHE Scan Data Enterer* (templateId: 1.3.6.1.4.1.19376.1.2.20.3)
23. [IHE] **MAY** contain [0..1] documentationOf, such that it
- a. contains *CDA Documentation Of*
 - Used to encode the date/time range of the original content. If the original content is representative of a single point in time then the endpoints of the date/time range shall be the same. Information regarding this date/time range shall be included, if it is known. In many cases this will have to be supplied by the operator.
24. [CDT] **CONF-HP-6: SHALL** satisfy: All patient, guardianPerson, assignedPerson, maintainingPerson, relatedPerson, intendedRecipient/informationRecipient, associatedPerson, and relatedSubject/subject elements have a name.
- [OCL]: -- implemented in Java using XPath selector
 - [XPath]: *[self::cda:patient or self::cda:guardianPerson or self::cda:assignedPerson or self::cda:maintainingPerson or self::cda:relatedPerson or self::cda:associatedPerson or self::cda:intendedRecipient/cda:informationRecipient or self::cda:relatedSubject/cda:subject]
25. [CDT] **CONF-HP-7: SHALL** satisfy: All patientRole, assignedAuthor, assignedEntity[not(parent::dataEnterer)] and associatedEntity elements have an addr and telecom element.
- [OCL]: -- implemented in Java using XPath selector
 - [XPath]: *[self::cda:patientRole or self::cda:assignedAuthor or self::cda:assignedEntity[not(parent::cda:dataEnterer)] or self::cda:associatedEntity]
26. [CDT] **CONF-HP-8: SHOULD** satisfy: All guardian, dataEnterer/assignedEntity, relatedEntity, intendedRecipient, relatedSubject and participantRole elements have an addr and telecom element.
- [OCL]: -- implemented in Java using XPath selector
 - [XPath]: *[self::cda:guardian or self::cda:assignedEntity[parent::cda:dataEnterer] or self::cda:relatedEntity or self::cda:intendedRecipient or self::cda:relatedSubject or self::cda:participantRole]

27. [CDT] CONF-HP-9: SHALL satisfy: All guardianOrganization, providerOrganization, wholeOrganization, representedOrganization, representedCustodianOrganization, receivedOrganization, scopingOrganization and serviceProviderOrganization elements have name, addr and telecom elements.

- When name, address, or telecom information is unknown and where these elements are required to be present, as with CDA conformance if the information is unknown, these elements will be represented using an appropriate value for the nullFlavor attribute on the element. Legal values according to this specification come from the HL7 NullFlavor vocabulary.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: *[self::cda:guardianOrganization or self::cda:providerOrganization or self::cda:wholeOrganization or self::cda:representedOrganization or self::cda:representedCustodianOrganization or self::cda:receivedOrganization or self::cda:scopingOrganization or self::cda:serviceProviderOrganization]

28. [CDT] CONF-HP-10: SHALL satisfy: Times or time intervals found in the ClinicalDocument/effectiveTime, author/time, dataEnterer/time, legalAuthenticator/time, authenticator/time and encompassingEncounter/effectiveTime elements SHALL be precise to the day, SHALL include a time zone if more precise than to the day, and SHOULD be precise to the second.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: /cda:ClinicalDocument/cda:effectiveTime | //cda:author/cda:time | //cda:dataEnterer/cda:time | //cda:encompassingEncounter/cda:effectiveTime

29. [CDT] CONF-HP-11: SHALL satisfy: Times or time intervals found in the asOrganizationPartOf/effectiveTime, asMaintainedEntity/effectiveTime, relatedEntity/effectiveTime, serviceEvent/effectiveTime, ClinicalDocument/participant/time, serviceEvent/performer/time and encounterParticipant/time SHALL be precise at least to the year, SHOULD be precise to the day, and MAY omit time zone.

- [OCL]: cda::OrganizationPartOf.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject)->union(cda::MaintainedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::ServiceEvent.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::EncounterParticipant.allInstances()->select(time.ocIsUndefined()).oclAsType(ecore::EObject))->union(self.participant->select(time.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::OrganizationPartOf.allInstances().effectiveTime->union(cda::MaintainedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::ServiceEvent.allInstances().effectiveTime->union(cda::EncounterParticipant.allInstances().time)->union(self.participant.time)->select(current : datatypes::IVL_TS | ((not current.low.ocIsUndefined()) and (current.low.value.ocIsUndefined() or current.low.value.size() < 4)) or ((not current.center.ocIsUndefined()) and (current.center.value.ocIsUndefined() or current.center.value.size() < 4)) or ((not current.high.ocIsUndefined()) and (current.high.value.ocIsUndefined() or current.high.value.size() < 4)) or (current.low.ocIsUndefined() and current.center.ocIsUndefined() and current.high.ocIsUndefined())).oclAsType(ecore::EObject))

30. [CDT] CONF-HP-12: SHALL satisfy: Telephone numbers match the regular expression pattern `tel:\+?[0-9().]+`

- The telecom element is used to provide a contact telephone number for the various participants that require it. The value attribute of this element is a URL that specifies the telephone number, as indicated by the TEL data type.
- All telephone numbers are to be encoded using a restricted form of the tel: URL scheme. A telephone number used for voice calls begins with the URL scheme tel:. If the number is a global phone number, it starts with a plus (+) sign. The remaining number is made up of the dialing digits and an optional extension and may also contain visual separators.
- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `//*[self::cda:telecom]`

31. [CDT] CONF-HP-13: SHALL satisfy: At least one dialing digit is present in the phone number after visual separators are removed.

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `//*[self::cda:telecom]`

32. [CDT] CONF-HP-14: SHALL satisfy: If the telephone number is unknown it is represented using the appropriate flavor of null.

- There is no way to distinguish between an unknown phone number and an unknown e-mail or other telecommunications address. Therefore, the following convention will be used: Any telecom element that uses a flavor of null (has a nullFlavor attribute) is assumed to be a telephone number, which is the only required telecommunications address element within this DSTU.
- [OCL]: -- implemented in Java using XPath selector
- [XPath]: `//*[self::cda:telecom]`

33. [CDT] CONF-HP-16: SHALL satisfy: The extension attribute of the typeId element is POCD_HD000040.

- [OCL]: `self.typeId.extension = 'POCD_HD000040'`

34. [CDT] CONF-HP-17: SHALL satisfy: The id/@root attribute is a syntactically correct UUID or OID.

35. [CDT] CONF-HP-18: SHALL satisfy: UUIDs are represented in the form XXXXXXXX-XXXX-XXXX-XXXXXXXXXXXXXXXXXX, where each X is a character from the set [A-Fa-f0-9].

36. [CDT] CONF-HP-19: SHALL satisfy: OIDs are represented in dotted decimal notation, where each decimal number is either 0, or starts with a nonzero digit. More formally, an OID SHALL be in the form $([0-2])([1-9][0-9]^*(0))^+$.

- Organizations that wish to use OIDs should properly register their OID root and ensure uniqueness of the OID roots used in identifiers. A large number of mechanisms exist for obtaining OID roots for free or for a reasonable fee. HL7 maintains an OID registry page from which organizations may request an OID root under the HL7 OID root. This page can be accessed at: <http://www.hl7.org/oid>.

Another useful resource lists the many ways to obtain a registered OID Root for free or a small fee anywhere in the world and is located at: <http://www.dclunie.com/medical-image-faq/html/part8.html#UIDRegistration>.

The manner in which the OID root is obtained is not constrained by this DSTU.

37. [CDT] CONF-HP-20: SHALL satisfy: OIDs are no more than 64 characters in length.

- OIDs are limited by this specification to no more than 64 characters in length for compatibility with other standards and Implementation Guides.
- [OCL]: `self.id->select((not id.root.ocIsUndefined()) and id.root.size() > 64)`

38. [CDT] CONF-HP-25: SHALL satisfy: languageCode has the form nn, or nn-CC.

39. [CDT] CONF-HP-26: SHALL satisfy: The nn portion of languageCode is a legal ISO-639-1 language code in lowercase.

40. [CDT] CONF-HP-27: SHALL satisfy: The CC portion languageCode, if present, SHALL be an ISO-3166 country code in uppercase.

41. [CDT] CONF-HP-28: SHALL satisfy: Both setId and versionNumber SHALL be present or both SHALL be absent.

- The ClinicalDocument/setId element uses the instance identifier (II) data type. The root attribute is a UUID or OID that uniquely identifies the scope of the identifier, and the extension attribute is a value that is unique within the scope of the root for the set of versions of the document. See Document Identification, Revisions, and Addenda in Section 4.2.3.1 of the CDA Specification for some examples showing the use of the setId element.
 - [OCL]: (self.setId.ocIsUndefined() and self.versionNumber.ocIsUndefined()) xor (not self.setId.ocIsUndefined() and not self.versionNumber.ocIsUndefined())
- 42. [CDT] CONF-HP-29: SHALL** satisfy: The @extension and/or @root of setId and id SHALL be different when both are present.
- [OCL]: (not self.setId.ocIsUndefined() and not self.id.ocIsUndefined()) implies (self.setId.root <> self.id.root or self.setId.extension <> self.id.extension)
- 43. [CDT] CONF-HP-30: SHALL** satisfy: A copyTime element SHALL NOT be present.
- The ClinicalDocument/copyTime element has been deprecated in CDA R2.
 - [OCL]: self.copyTime.ocIsUndefined()
- 44. [CDT] CONF-HP-31: SHALL** satisfy: At least one recordTarget/patientRole element is present.
- [OCL]: self.recordTarget->size() > 0 and self.recordTarget->exists(target : cda::RecordTarget | not target.patientRole.ocIsUndefined())
- 45. [CDT] CONF-HP-32: SHALL** satisfy: A patient/birthTime element SHALL be present. The patient/birthTime element SHALL be precise at least to the year, and SHOULD be precise at least to the day, and MAY omit time zone. If unknown, it SHALL be represented using a flavor of null.
- [OCL]: self.recordTarget->forall(target : cda::RecordTarget | not target.patientRole.ocIsUndefined()) implies (not target.patientRole.patient.birthTime.value.ocIsUndefined() or not target.patientRole.patient.birthTime.nullFlavor.ocIsUndefined()))
- 46. [CDT] CONF-HP-33: SHALL** satisfy: A patient/administrativeGenderCode element SHALL be present. If unknown, it SHALL be represented using a flavor of null. Values for administrativeGenderCode SHOULD be drawn from the HL7 AdministrativeGender vocabulary.
- TODO: add OCL test for terminology
 - [OCL]: self.recordTarget->forall(target : cda::RecordTarget | not target.patientRole.ocIsUndefined()) implies (not target.patientRole.patient.administrativeGenderCode.code.ocIsUndefined() or not target.patientRole.patient.administrativeGenderCode.nullFlavor.ocIsUndefined()))
- 47. [CDT] CONF-HP-34: MAY** satisfy: The maritalStatusCode, religiousAffiliationCode, raceCode and ethnicGroupCode MAY be present. If maritalStatusCode, religiousAffiliationCode, raceCode and ethnicGroupCode elements are present, they SHOULD be encoded using the appropriate HL7 vocabularies.
- 48. [CDT] CONF-HP-35: SHOULD** satisfy: The guardian element is present when the patient is a minor child.
- 49. [CDT] CONF-HP-36: MAY** satisfy: The providerOrganization element is present.
- [OCL]: self.recordTarget->exists(target : cda::RecordTarget | not target.patientRole.providerOrganization.ocIsUndefined())
- 50. [CDT] CONF-HP-37: SHALL** satisfy: The author/time element is present.
- The author/time element represents the start time of the author's participation in the creation of the clinical document.
 - [OCL]: self.author->forall(author : cda::Author | not author.time.ocIsUndefined())

51. [CDT] **CONF-HP-38: SHALL** satisfy: The assignedAuthor/id element is present.
- [OCL]: `self.author->forall(author : cda::Author | author.assignedAuthor.id->size() > 0)`
52. [CDT] **CONF-HP-39: SHALL** satisfy: An assignedAuthor element contains at least one assignedPerson or assignedAuthoringDevice elements.
- [OCL]: `self.author->forall(author : cda::Author | not author.assignedAuthor.assignedPerson.ocIsUndefined() or not author.assignedAuthor.assignedAuthoringDevice.ocIsUndefined())`
53. [CDT] **CONF-HP-40: SHALL** satisfy: When dataEnterer is present, an assignedEntity/assignedPerson element is present.
- [OCL]: `not self.dataEnterer.ocIsUndefined() implies not self.dataEnterer.assignedEntity.assignedPerson.ocIsUndefined()`
54. [CDT] **CONF-HP-41: MAY** satisfy: The dataEnterer/time element MAY be present. If present, it represents the starting time of entry of the data.
- [OCL]: `not self.dataEnterer.ocIsUndefined() implies not self.dataEnterer.time.ocIsUndefined()`
55. [CDT] **CONF-HP-42: MAY** satisfy: The informant element is present.
- [OCL]: `self.informant->size() > 0`
56. [CDT] **CONF-HP-43: SHALL** satisfy: When informant is present, an assignedEntity/assignedPerson or relatedEntity/relatedPerson element SHALL be present.
- [OCL]: `self.informant->forall(i : cda::Informant12 | not i.assignedEntity.assignedPerson.ocIsUndefined() or not i.relatedEntity.relatedPerson.ocIsUndefined())`
57. [CDT] **CONF-HP-44: SHALL** satisfy: When the informant is a healthcare provider with an assigned role, the informant SHALL be represented using the assignedEntity element
- Assigned health care providers may be a source of information when a document is created. (e.g., a nurse's aide who provides information about a recent significant health care event that occurred within an acute care facility.) In these cases, the assignedEntity element is used.
 - TODO: how to determin if informant is a healthcare provider? condition for implementing OCL
58. [CDT] **CONF-HP-45: SHALL** satisfy: Allowable values for informant/relatedEntity/@classCode SHALL be CON, PRS, CAREGIVER, AGNT or PROV from the RoleClass vocabulary.
- When the informant is a personal relation, that informant is represented in the relatedEntity element. The code element of the relatedEntity describes the relationship between the informant and the patient.
- The relationship between the informant and the patient needs to be described to help the receiver of the clinical document understand the information in the document.
59. [CDT] **CONF-HP-46: SHALL** satisfy: When relatedEntity/@classCode is PRS, values in relatedEntity/code SHALL come from the HL7 PersonalRelationshipRoleType vocabulary or from SNOMED, any subtype of "Person in the family" (303071001).
60. [CDT] **CONF-HP-47: SHALL** satisfy: When an informant is an unrelated person not otherwise specified, the value relatedEntity/@classCode SHALL be set to CON to indicate that this person is a contact.
- Individuals with no prior personal relationship to the patient (e.g., a witness to a significant health care event) may provide information about the patient.
61. [CDT] **CONF-HP-48: SHALL** satisfy: When the informant is a healthcare provider without an assigned role, the informant SHALL be represented using the relatedEntity element and the value of relatedEntity/@classCode SHALL be set to PROV.
- A health care provider who does not have an assigned role at the institution may provide information. To record an informant that does not have an assigned role that can be represented within the context of the document, the information will be represented using the relatedEntity element and the value of relatedEntity/@classCode will be set to PROV.
62. [CDT] **CONF-HP-49: SHOULD** satisfy: When the informant is a healthcare provider, the value of relatedEntity/code SHOULD be present and indicate the type of healthcare provider.

63. [CDT] **CONF-HP-50: MAY** satisfy: The ClinicalDocument/informationRecipient element MAY be present. When informationRecipient is used, at least one informationRecipient/intendedRecipient/informationRecipient or informationRecipient/intendedRecipient/receivedOrganization SHALL be present.
64. [CDT] **CONF-HP-51: SHALL** satisfy: The assignedEntity/assignedPerson element SHALL be present in legalAuthenticator.
- [OCL]: not self.legalAuthenticator.ocIsUndefined() implies not self.legalAuthenticator.assignedEntity.assignedPerson.ocIsUndefined()
65. [CDT] **CONF-HP-52: SHALL** satisfy: The assignedEntity/assignedPerson element SHALL be present in an authenticator element.
- [OCL]: self.authenticator->forAll(auth : cda::Authenticator | auth.assignedEntity->forAll(entity : cda::AssignedEntity | not entity.assignedPerson.ocIsUndefined()))
66. [CDT] **CONF-HP-10: SHOULD** satisfy: Times or time intervals found in the ClinicalDocument/effectiveTime, author/time, dataEnterer/time, legalAuthenticator/time, authenticator/time and encompassingEncounter/effectiveTime elements SHALL be precise to the day, SHALL include a time zone if more precise than to the day, and SHOULD be precise to the second.
- Should portion of CON-HP-10 constrain
 - [OCL]: -- implemented in Java using XPath selector
 - [XPath]: /cda:ClinicalDocument/cda:effectiveTime | //cda:author/cda:time | //cda:dataEnterer/cda:time | //cda:encompassingEncounter/cda:effectiveTime
67. [CDT] **CONF-HP-11: SHOULD** satisfy: Times or time intervals found in the asOrganizationPartOf/effectiveTime, asMaintainedEntity/effectiveTime, relatedEntity/effectiveTime, serviceEvent/effectiveTime, ClinicalDocument/participant/time, serviceEvent/performer/time and encounterParticipant/time SHALL be precise at least to the year, SHOULD be precise to the day, and MAY omit time zone.
- Should portion of CON-HP-11 constrain
 - [OCL]: cda::OrganizationPartOf.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject)->union(cda::MaintainedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::RelatedEntity.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::ServiceEvent.allInstances()->select(effectiveTime.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::EncounterParticipant.allInstances()->select(time.ocIsUndefined()).oclAsType(ecore::EObject))->union(self.participant->select(time.ocIsUndefined()).oclAsType(ecore::EObject))->union(cda::OrganizationPartOf.allInstances().effectiveTime->union(cda::MaintainedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::RelatedEntity.allInstances().effectiveTime->union(cda::ServiceEvent.allInstances().effectiveTime->union(cda::EncounterParticipant.allInstances().time->union(self.participant.time)->select(current : datatypes::IVL_TS | ((not current.low.ocIsUndefined()) and (current.low.value.ocIsUndefined() or current.low.value.size() < 8)) or ((not current.center.ocIsUndefined()) and (current.center.value.ocIsUndefined() or current.center.value.size() < 8)) or ((not current.high.ocIsUndefined()) and (current.high.value.ocIsUndefined() or current.high.value.size() < 8)))

```
or (current.low.ocIsUndefined() and current.center.ocIsUndefined() and
current.high.ocIsUndefined()) ).ocIsType( ecore::EObject))
```

68. [IHE] **SHALL** satisfy: The typeId root is 2.16.840.1.113883.1.3 and extension is POCD_HD000040.

- [OCL]: self.typeId.root = '2.16.840.1.113883.1.3' and self.typeId.extension = 'POCD_HD000040'

69. [IHE] **SHALL** satisfy: Contains exactly one recordTarget.

- Contains identifying information about the patient concerned in the original content. In many cases this will have to be supplied by the operator.
- [OCL]: self.recordTarget->size() = 1

70. [IHE] **SHALL** satisfy: Contains one or more author / assignedAuthor / assignedPerson and/or author / assignedAuthor / representedOrganization

- [OCL]: self.author->exists(author : cda::Author | not author.assignedAuthor.assignedPerson.ocIsUndefined() or not author.assignedAuthor.representedOrganization.ocIsUndefined())

71. [IHE] **SHALL** satisfy: recordTarget/patientRole/id element includes both the root and the extension attributes.

- [OCL]: self.recordTarget->forall(target : cda::RecordTarget | not target.patientRole.ocIsUndefined() and target.patientRole.id->forall(roleId : datatypes::II | not roleId.root.ocIsUndefined() and not roleId.extension.ocIsUndefined()))

72. [IHE] **SHALL** satisfy: At least one recordTarget/patientRole/addr element includes at least the country subelement.

- The addr element has an unbounded upper limit on occurrences. It can, and should, be replicated to include additional addresses for a patient, each minimally specified by the country sub element.
- [OCL]: self.recordTarget->exists(target : cda::RecordTarget | not target.patientRole.ocIsUndefined() and target.patientRole.addr->exists(address : datatypes::AD | address.country->exists(c : datatypes::ADXP | not c.ocIsUndefined() and c.getText().size() > 0)))

73. [IHE] **SHALL** satisfy: At least one recordTarget/patientRole/patient/name element has at least one given subelement and one family subelement.

- [OCL]: self.recordTarget->exists(target : cda::RecordTarget | not target.patientRole.patient.ocIsUndefined() and target.patientRole.patient.name->exists(name: datatypes::PN | not name.given->isEmpty() and not name.family->isEmpty()))

74. [IHE] **SHALL** satisfy: The recordTarget/patientRole/patient/ administrativeGenderCode element is present.

- [OCL]: self.recordTarget->one(target : cda::RecordTarget | not target.patientRole.patient.administrativeGenderCode.ocIsUndefined())

75. [IHE] **SHALL** satisfy: The recordTarget/patientRole/patient/ birthTime element is present with precision to the year.

- [OCL]: self.recordTarget->one(target : cda::RecordTarget | not target.patientRole.patient.birthTime.ocIsUndefined())

76. [IHE] **SHOULD** satisfy: Contains author of type ScanOriginalAuthor to represent original author of this scanned document.

- [OCL]: self.author->exists(author : cda::Author | not author.ocIsUndefined() and author.ocIsKindOf(ihe::ScanOriginalAuthor))

77. [IHE] **SHALL** satisfy: Contains author element of type ScanningDevice to represent the scanning device and software used to produce the scanned content.

- [OCL]: self.author->exists(author : cda::Author | not author.ocIsUndefined() and author.ocIsKindOf(ihe::ScanningDevice))

78. [IHE] SHALL satisfy: Contains ScanDataEnterer element to represent the scanner operator who produced the scanned content.

- [OCL]: `not self.dataEnterer.ocIsUndefined() and self.dataEnterer.ocIsKindOf(ihe::ScanDataEnterer)`

79. [IHE] SHALL satisfy: custodian/assignedCustodian/representedCustodianOrganization/name is present.

- [OCL]: `not self.custodian.assignedCustodian.representedCustodianOrganization.name.ocIsUndefined()`

80. [IHE] SHALL satisfy: custodian/assignedCustodian/representedCustodianOrganization/addr is present and includes at least the country sub element.

- [OCL]: `not self.custodian.assignedCustodian.representedCustodianOrganization.addr.ocIsUndefined() and self.custodian.assignedCustodian.representedCustodianOrganization.addr.country->exists(c : datatypes::ADXP | not c.ocIsUndefined() and c.getText().size() > 0)`

81. [IHE] SHALL satisfy: The legalAuthenticator/assignedEntity/id element if known shall include both the root and the extension attributes.

- [OCL]: `self.legalAuthenticator.assignedEntity.id->size() > 0 implies (self.legalAuthenticator.assignedEntity.id->forall(ident : datatypes::II | not ident.root.ocIsUndefined() and not ident.extension.ocIsUndefined()))`

82. [IHE] SHALL satisfy: The component/nonXMLBody is present.

- Used to wrap the scanned content. The nonXMLBody element is guaranteed to be unique; thus the x-path to recover the scanned content is essentially fixed.
- [OCL]: `not self.component.nonXMLBody.ocIsUndefined()`

83. [IHE] SHALL satisfy: If the human-readable language of the scanned content is different than that of the wrapper (specified in ClinicalDocument/languageCode), then ClinicalDocument/component/nonXMLBody/languageCode shall be present. Attribute code@code shall be present. Attribute code@codeSystem shall be IETF (Internet Engineering Task Force) RFC 3066 in accordance with the HL7 CDA R2 documentation.

84. [IHE] SHALL satisfy: The component/nonXMLBody/text element is present and encoded using xs:base64Binary encoding. Its #CDATA will contain the scanned content.

- [OCL]: `not self.component.nonXMLBody.text.ocIsUndefined()`

85. [IHE] SHALL satisfy: The component/nonXMLBody/text@mediaType is "application/pdf" for PDF, or "text/plain" for plaintext.

- [OCL]: `self.component.nonXMLBody.text.mediaType = 'application/pdf' or self.component.nonXMLBody.text.mediaType = 'text/plain'`

86. [IHE] SHALL satisfy: The component/nonXMLBody/text@representation is B64.

- The @representation for both PDF and plaintext scanned content will be "B64", because this profile requires the base-64 encoding of both formats.
- [OCL]: `self.component.nonXMLBody.text.representation = datatypes::BinaryDataEncoding::B64`

87. [HITSP] SHOULD satisfy: This construct should not be used when the data are structured.

- [OCL]: `self.component.structuredBody.ocIsUndefined()`

88. [HITSP] SHALL satisfy: Each document pertains to one and only one patient.

- [OCL]: `self.recordTarget->one(record : cda::RecordTarget | not record.patientRole.ocIsUndefined() and not record.patientRole.patient.ocIsUndefined())`

Admission Medication History Section

[Section: templateId 2.16.840.1.113883.3.88.11.83.113]

The Admission Medication Section contains information about the relevant medications of a patient prior to admission to a facility.

1. Conforms to [CDA Section](#)
2. Conforms to [IHE Admission Medication History Section](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.3.20)
3. [IHE] **SHALL** contain [1..1] code/@code = "42346-7" *MEDICATIONS ON ADMISSION* (CodeSystem: 2.16.840.1.113883.6.1 LOINC STATIC 2.26)

Allergies Reactions Section

[Section: templateId 2.16.840.1.113883.3.88.11.83.102]

The Allergies and Other Adverse Reactions Section contains data on the substance intolerances and the associated adverse reactions suffered by the patient. At a minimum, currently active and any relevant historical allergies and adverse reactions shall be listed.

1. Conforms to [CDA Section](#)
2. Conforms to [CCD Alerts Section](#) template (templateId: 2.16.840.1.113883.10.20.1.2)
3. Conforms to [IHE Allergies Reactions Section](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.3.13)
4. [CCD] **SHALL** contain [1..1] code/@code = "48765-2" *Allergies, adverse reactions, alerts* (CodeSystem: 2.16.840.1.113883.6.1 LOINC STATIC 2.26)
5. [CCD] **SHALL** contain [1..1] title
6. [CCD] **SHALL** contain [1..1] text
7. [CCD] **SHOULD** contain [1..*] entry, such that it
 - a. contains [CCD Problem Act](#) (templateId: 2.16.840.1.113883.10.20.1.27)
8. [CCD] **SHOULD** satisfy: Contains a case-insensitive language-insensitive string containing "alert" and/or "allergies and adverse reactions".
9. [CCD] **SHALL** satisfy: The absence of known allergies, adverse reactions or alerts **SHALL** be explicitly asserted.

Figure 9: Allergies Reactions Section example

Assessment And Plan Section

[Section: templateId 2.16.840.1.113883.3.88.11.83.123]

The Assessment and Plan Section contains information about the assessment of the patient's condition and expectations for care including proposals, goals, and order requests for monitoring, tracking, or improving the condition of the patient.

An assessment and plan section varies from the plan of care section defined later in that it includes a physician assessment of the patient condition.

NOTE : The assessments described in this section are physician assessments of the patient's current condition, and do not include assessments of functional status, or other assessments typically used in nursing. In Implementation Guides currently selected, when both the assessment and plan are documented, they are included together in a single section documenting both. When the physician assessment is not present, only the plan of care section appears. There are no cases where a physician assessment is provided without a plan.

1. Conforms to [CDA Section](#)
2. Conforms to [IHE Assessment And Plan Section](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.1.13.2.5)
3. [IHE] **SHALL** contain [1..1] code/@code = "51847-2" *ASSESSMENT AND PLAN* (CodeSystem: 2.16.840.1.113883.6.1 LOINC STATIC 2.26)

```

CLINICAL STATEMENT TEMPLATES

Topics:

- *Allergy Drug Sensitivity*
- *Comment*
- *Condition*
- *Condition Entry*
- *Encounter*
- *Immunization*
- *Insurance Provider*
- *Medication*
- *Medication Combination Medication*
- *Medication Conditional Dose*
- *Medication Normal Dose*
- *Medication Split Dose*
- *Medication Tapered Dose*
- *Procedure*
- *Result*
- *Vital Sign*

This section of the Implementation Guide details the clinical statement entries referenced in the document section templates. The clinical statement entry templates are arranged alphabetically.

Allergy Drug Sensitivity

[Act: templateId 2.16.840.1.113883.3.88.11.83.6]

This module contains the allergy or intolerance conditions and the associated adverse reactions suffered by the patient. See the HL7 Continuity of Care Document Section 3.8 for constraints applicable to this module.

1. Conforms to [CDA Clinical Statement](#)
2. Conforms to [CDA Act](#)
3. Conforms to [CCD Problem Act](#) template (templateId: 2.16.840.1.113883.10.20.1.27)
4. Conforms to [IHE Concern Entry](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5.1)
5. Conforms to [IHE Allergy Intolerance Concern](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5.3)
6. [CCD] **SHALL** contain [1..1] @classCode = "ACT"
7. [CCD] **SHALL** contain [1..1] @moodCode = "EVN"
8. [CCD] **SHALL** contain [1..1] code/@nullFlavor = "NA" *NA (not applicable)*
9. [CCD] **SHALL** contain [1..*] id
10. [IHE] **SHALL** contain [1..1] effectiveTime
11. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. contains [CCD Episode Observation](#) (templateId: 2.16.840.1.113883.10.20.1.41)
12. [CCD] **SHALL** satisfy: Contains one or more entryRelationship
 - [OCL]: not self.entryRelationship->isEmpty()
13. [CCD] **CONF-152: MAY** satisfy: A problem act MAY reference a problem observation, alert observation (see section Alerts) or other clinical statement that is the subject of concern, by setting the value for "Act / entryRelationship / @typeCode" to be "SUBJ" 2.16.840.1.113883.5.1002 ActRelationshipType STATIC.
14. [CCD] **CONF-153: SHOULD** satisfy: The target of a problem act with Act / entryRelationship / @typeCode="SUBJ" SHOULD be a problem observation (in the Problem section) or alert observation (in the Alert section), but MAY be some other clinical statement.
 - [OCL]:

```
self.getEntryRelationshipTargets(vocab::x_ActRelationshipEntryRelationship::SUBJ,
cda::ClinicalStatement)->forall(target : cda::ClinicalStatement | not
target.ocIsUndefined() and
(target.ocIsKindOf(ccd::ProblemObservation) or
target.ocIsKindOf(ccd::AlertObservation)))
```
15. [CCD] **SHOULD** satisfy: In Problem Section, a Problem Act SHOULD contain a Problem Observation.
 - [OCL]: self.getSection().ocIsKindOf(ccd::ProblemSection) implies

```
self.getObservations()
->exists(obs : cda::Observation |
obs.ocIsKindOf(ccd::ProblemObservation))
```
16. [CCD] **SHOULD** satisfy: In Alert Section, a ProblemAct SHOULD contain an Alert Observation.
 - [OCL]: self.getSection().ocIsKindOf(ccd::AlertsSection) implies

```
self.getObservations()
->exists(obs : cda::Observation |
obs.ocIsKindOf(ccd::AlertObservation))
```
17. [CCD] **MAY** satisfy: Contains exactly one Patient Awareness
 - [OCL]: self.participant->one(partic : cda::Participant2 |
partic.ocIsKindOf(ccd::PatientAwareness))

```

Condition

[Act: templateId 2.16.840.1.113883.3.88.11.83.7]

1. Conforms to *CDA Clinical Statement*
2. Conforms to *CDA Act*
3. Conforms to *CCD Problem Act* template (templateId: 2.16.840.1.113883.10.20.1.27)
4. Conforms to *IHE Concern Entry* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5.1)
5. Conforms to *IHE Problem Concern Entry* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5.2)
6. [CCD] **SHALL** contain [1..1] @classCode = "ACT"
7. [CCD] **SHALL** contain [1..1] @moodCode = "EVN"
8. [CCD] **SHALL** contain [1..1] code/@nullFlavor = "NA" *NA (not applicable)*
9. [CCD] **SHALL** contain [1..*] id
10. [IHE] **SHALL** contain [1..1] effectiveTime
11. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. contains *CCD Episode Observation* (templateId: 2.16.840.1.113883.10.20.1.41)
12. [IHE] **SHALL** contain [1..*] entryRelationship, such that it
 - a. contains *IHE Problem Entry* (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5)
13. [HITSP] **SHALL** contain [1..*] entryRelationship, such that it
 - a. has @typeCode="SUBJ" *SUBJ (has subject)*
 - b. contains *Condition Entry*
14. [CCD] **SHALL** satisfy: Contains one or more entryRelationship
 - [OCL]: not self.entryRelationship->isEmpty()
15. [CCD] **CONF-152: MAY** satisfy: A problem act MAY reference a problem observation, alert observation (see section Alerts) or other clinical statement that is the subject of concern, by setting the value for "Act / entryRelationship / @typeCode" to be "SUBJ" 2.16.840.1.113883.5.1002 ActRelationshipType STATIC.
16. [CCD] **CONF-153: SHOULD** satisfy: The target of a problem act with Act / entryRelationship / @typeCode="SUBJ" SHOULD be a problem observation (in the Problem section) or alert observation (in the Alert section), but MAY be some other clinical statement.
 - [OCL]:

```

self.getEntryRelationshipTargets(vocab::x_ActRelationshipEntryRelationship::SUBJ,
cda::ClinicalStatement)->forall(target : cda::ClinicalStatement | not
target.ocIsUndefined() and
(target.ocIsKindOf(ccd::ProblemObservation) or
target.ocIsKindOf(ccd::AlertObservation)))
          
```
17. [CCD] **SHOULD** satisfy: In Problem Section, a Problem Act SHOULD contain a Problem Observation.
 - [OCL]: self.getSection().ocIsKindOf(ccd::ProblemSection) implies

```

self.getObservations()
->exists(obs : cda::Observation |
obs.ocIsKindOf(ccd::ProblemObservation))
          
```
18. [CCD] **SHOULD** satisfy: In Alert Section, a ProblemAct SHOULD contain an Alert Observation.
 - [OCL]: self.getSection().ocIsKindOf(ccd::AlertsSection) implies

```

self.getObservations()
          
```

```
->exists(obs : cda::Observation |
obs.ocIsKindOf(ccd::AlertObservation))
```

19. [CCD] MAY satisfy: Contains exactly one Patient Awareness

- [OCL]: self.participant->one(partic : cda::Participant2 |
partic.ocIsKindOf(ccd::PatientAwareness))

```

Figure 37: Condition example

Condition Entry

[Observation: templateId null]

1. Conforms to *CDA Clinical Statement*
2. Conforms to *CDA Observation*
3. Conforms to *CCD Problem Observation* template (templateId: 2.16.840.1.113883.10.20.1.28)
4. Conforms to *IHE Problem Entry* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5)
5. [CCD] Contains [1..1] @classCode = "OBS"
6. [CCD] **SHALL** contain [1..1] @moodCode = "EVN"
7. [HITSP] **SHALL** contain [1..1] code, which **SHALL** be selected from ValueSet 2.16.840.1.113883.3.88.12.3221.7.2 Problem Type Value Set STATIC
8. [CCD] **SHALL** contain [1..1] statusCode/@code = "completed" (CodeSystem: 2.16.840.1.113883.5.14 ActStatus STATIC V3NE08)
9. [HITSP] **SHOULD** contain [1..1] effectiveTime
 - The problem date constraints include the onset and resolution dates for the problem. The onset date shall be recorded in the <low> element of the <effectiveTime> element when known. The resolution data shall be recorded in the <high> element of the <effectiveTime> element when known. These dates represent the clinically effective time span over which the problem existed. If the problem is known to be resolved, but the date of resolution is not known, then the <high> element shall be present, and the nullFlavor attribute shall be set to 'UNK'. Therefore, the existence of an <high> element within a problem does indicate that the problem has been resolved.
10. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. has @typeCode="REFR" *REFR* (refers to)
 - b. contains *CCD Problem Status Observation* (templateId: 2.16.840.1.113883.10.20.1.50)

4. Conforms to [IHE Medication](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.7)
5. [CDA] Contains [1..1] @classCode = "SBADM", where its data type is ActClass
6. [CDA] Contains [1..1] @moodCode, where its data type is x_DocumentSubstanceMood
7. [CDA] Contains [1..1] consumable, where its type is [CDA Consumable](#)
8. [CCD] **CONF-306: SHALL** contain [1..*] id
9. [CCD] **CONF-307: SHOULD** contain [1..1] statusCode
10. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. contains [CCD Medication Series Number Observation](#) (templateId: 2.16.840.1.113883.10.20.1.46)
11. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. contains [CCD Medication Status Observation](#) (templateId: 2.16.840.1.113883.10.20.1.47)
12. [CCD] **CONF-330, CONF-333: MAY** contain [1..*] entryRelationship, such that it
 - a. has @typeCode="SUBJ" *SUBJ (has subject)*
 - b. contains [CCD Patient Instruction](#) (templateId: 2.16.840.1.113883.10.20.1.49)
13. [HITSP] **CONF-308: SHOULD** contain [1..*] effectiveTime

- Indicate Medication Stopped: Used to express a "hard stop," such as the last Sig sequence in a tapering dose, where the last sequence is 'then D/C' or where the therapy/drug is used to treat a condition and that treatment is for a fixed duration with a hard stop, such as antibiotic treatment, etc.
 - Administration Timing: defines a specific administration or use time. Can be a text string (Morning, Evening, Before Meals, 1 Hour After Meals, 3 Hours After Meals, Before Bed) or an exact time.
 - Frequency: defines how often the medication is to be administered as events per unit of time. Often expressed as the number of times per day (e.g., four times a day), but may also include event-related information (e.g., 1 hour before meals, in the morning, at bedtime). Complimentary to Interval, although equivalent expressions may have different implications (e.g., every 8 hours versus 3 times a day).
 - Interval: defines how the product is to be administered as an interval of time. For example, every 8 hours. Complimentary to Frequency, although equivalent expressions may have different implications (e.g., every 8 hours versus 3 times a day).
 - Duration: for non-instantaneous administrations, indicates the length of time the administration should be continued. For example, (infuse) over 30 minutes.
14. [CCD] **CONF-312: MAY** contain [0..1] `maxDoseQuantity`
15. [HITSP] **CONF-309, CONF-310: SHOULD** contain [1..1] `routeCode` (CodeSystem: 2.16.840.1.113883.5.112 HL7 RouteOfAdministration DYNAMIC)
- The route is a coded value, and indicates how the medication is received by the patient (by mouth, intravenously, topically, et cetera).
16. [CCD] **CONF-313: MAY** contain [0..1] `performer`, such that it
- a. contains *CDA Performer2*
 - Indicates the person administering a substance.
17. [IHE] **MAY** contain [0..*] `approachSiteCode`
- The site where the medication is administered, usually used with IV or topical drugs.
18. [IHE] **SHOULD** contain [0..1] `doseQuantity`
- The amount of the medication given. This should be in some known and measurable unit, such as grams, milligrams, et cetera. It may be measured in "administration" units (such as tablets or each), for medications where the strength is relevant. In this case, only the unit count is specified, no units are specified. It may be a range.
19. [IHE] **SHOULD** contain [0..1] `rateQuantity`
- The rate is a measurement of how fast the dose is given to the patient over time (e.g., .5 liter / 1 hr), and is often used with IV drugs.
20. [CCD] **CONF-305: SHALL** satisfy: Value for `moodCode` is "EVN" or "INT" 2.16.840.1.113883.5.1001 ActMood STATIC
- [OCL]: `self.moodCode=vocab::x_DocumentSubstanceMood::EVN or self.moodCode=vocab::x_DocumentSubstanceMood::INT`
21. [CCD] **CONF-311: SHOULD** satisfy: Contains exactly one `doseQuantity` or `rateQuantity`.
- [OCL]: `not self.doseQuantity.ocIsUndefined() or not self.rateQuantity.ocIsUndefined()`
22. [CCD] **CONF-314: MAY** satisfy: Has one or more associated consents, represented in the CCD Header as ClinicalDocument / authorization / consent.
- [OCL]: `self.getClinicalDocument().authorization->exists(auth : cda::Authorization | not auth.ocIsUndefined() and not auth.consent.ocIsUndefined())`
23. [CCD] **CONF-315: SHALL** satisfy: Contains one or more sources of information.
- [OCL]: `not self.informant->isEmpty() or not self.getSection().informant->isEmpty() or not self.getClinicalDocument().informant->isEmpty() or self.reference->exists(ref : cda::Reference | ref.typeCode = vocab::x_ActRelationshipExternalReference::XCRPT) or (self.entryRelationship->exists(rel : cda::EntryRelationship |`

```
rel.typeCode = vocab::x_ActRelationshipEntryRelationship::REFR
and rel.observation.code.code = '48766-0'))
```

24. [CCD] **CONF-327: MAY** satisfy: Contains one or more precondition / Criterion, to indicate that the medication is administered only when the associated (coded or free text) criteria are met.

- Indicates that the medication is administered only when the associated (coded or free text) criteria are met.
- [OCL]: `self.precondition->exists(precondition : cda::Precondition | not precondition.criterion.oclIsUndefined())`

25. [CCD] **CONF-328: MAY** satisfy: Contains one or more entryRelationship, where the value for @typeCode is "RSON" "Has reason" 2.16.840.1.113883.5.1002 ActRelationshipType STATIC.

- The target of the relationship represents the indication for the activity.
- [OCL]: `self.entryRelationship->exists(entryRel : cda::EntryRelationship | entryRel.typeCode = vocab::x_ActRelationshipEntryRelationship::RSON)`

26. [CCD] **CONF-329: SHALL** satisfy: entryRelationship / @typeCode="RSON" in a medication activity has a target of problem act, problem observation, or some other clinical statement.

- [OCL]: `self.getEntryRelationshipTargets(vocab::x_ActRelationshipEntryRelationship::RSON, cda::ClinicalStatement)->forall(target : cda::ClinicalStatement | not target.oclIsUndefined() and (target.oclIsKindOf(ccd::ProblemAct) or target.oclIsKindOf(ccd::ProblemObservation)))`

27. [IHE] **SHALL** satisfy: Contains the consumable name. If the name of the medication is unknown, the type, purpose or other description may be supplied.

- The name of the substance or product. This should be sufficient for a provider to identify the kind of medication. It may be a trade name or a generic name. This information is required in all medication entries. If the name of the medication is unknown, the type, purpose or other description may be supplied. The name should not include packaging, strength or dosing information. Note: Due to restrictions of the CDA schema, there is no way to explicitly link the name to the narrative text.
- [OCL]: `not self.consumable.manufacturedProduct.manufacturedLabeledDrug.name.oclIsUndefined() or not self.consumable.manufacturedProduct.manufacturedMaterial.name.oclIsUndefined()`

28. [HITSP] **SHALL** satisfy: The time at which the medication was stopped is determined based on the content of the <high> element of the first <effectiveTime> element.

29. [HITSP] **SHALL** satisfy: The HL7 data type for PIVL_TS uses the institutionSpecified attribute to indicate whether it is the interval (time between dosing), or frequency (number of doses in a time period) that is important. If institutionSpecified is not present or is set to false, then the time between dosing is important (every 8 hours). If true, then the frequency of administration is important (e.g., 3 times per day).

30. [HITSP] **C83-[DE-8-CDA-3]: SHALL** satisfy: The first <effectiveTime> SHALL use the IVL_TS data type unless for a single administration, in which case, it SHALL use the TS data type.

31. [HITSP] **C83-[DE-8.03-CDA-1]: SHALL** satisfy: Medications that are administered based on activities of daily living SHALL identify the events that trigger administration in the <event> element beneath the <effectiveTime> element. The <effectiveTime> element SHALL be of type EIVL_TS.

32. [HITSP] **C83-[DE-8.04-CDA-1]: SHALL** satisfy: Medications that are administered at a specified frequency SHALL record the expected interval between doses in the <period> element beneath an <effectiveTime> of type PIVL_TS. The <effectiveTime> element SHALL have an institutionSpecified attribute value of "true".

33. [HITSP] **C83-[DE-8.05-CDA-1]: SHALL** satisfy: Medications that are administered at a specified interval SHALL record interval between doses in the <period> element beneath an <effectiveTime> element of type PIVL_TS. The <effectiveTime> element SHALL have an institutionSpecified attribute value of "false".

Figure 43: Medication Combination Medication example

Medication Conditional Dose

[SubstanceAdministration: templateId null]

1. Conforms to *IHE Conditional Dose* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.10)
2. Conforms to *CDA Clinical Statement*
3. Conforms to *CDA Substance Administration*
4. Conforms to *CCD Medication Activity* template (templateId: 2.16.840.1.113883.10.20.1.24)
5. Conforms to *IHE Medication* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.7)
6. Conforms to *Medication* template (templateId: 2.16.840.1.113883.3.88.11.83.8)
7. [CDA] Contains [1..1] @classCode = "SBADM", where its data type is ActClass
8. [CDA] Contains [1..1] @moodCode, where its data type is x_DocumentSubstanceMood
9. [CDA] Contains [1..1] consumable, where its type is *CDA Consumable*
10. [CCD] **CONF-306: SHALL** contain [1..*] id
11. [CCD] **CONF-307: SHOULD** contain [1..1] statusCode
12. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. contains *CCD Medication Series Number Observation* (templateId: 2.16.840.1.113883.10.20.1.46)
13. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. contains *CCD Medication Status Observation* (templateId: 2.16.840.1.113883.10.20.1.47)
14. [CCD] **CONF-330, CONF-333: MAY** contain [1..*] entryRelationship, such that it
 - a. has @typeCode="SUBJ" *SUBJ* (has subject)
 - b. contains *CCD Patient Instruction* (templateId: 2.16.840.1.113883.10.20.1.49)
15. [HITSP] **CONF-308: SHOULD** contain [1..*] effectiveTime
 - Indicate Medication Stopped: Used to express a "hard stop," such as the last Sig sequence in a tapering dose, where the last sequence is 'then D/C' or where the therapy/drug is used to treat a condition and that treatment is for a fixed duration with a hard stop, such as antibiotic treatment, etc.
 - Administration Timing: defines a specific administration or use time. Can be a text string (Morning, Evening, Before Meals, 1 Hour After Meals, 3 Hours After Meals, Before Bed) or an exact time.

- Frequency: defines how often the medication is to be administered as events per unit of time. Often expressed as the number of times per day (e.g., four times a day), but may also include event-related information (e.g., 1 hour before meals, in the morning, at bedtime). Complimentary to Interval, although equivalent expressions may have different implications (e.g., every 8 hours versus 3 times a day).
- Interval: defines how the product is to be administered as an interval of time. For example, every 8 hours. Complimentary to Frequency, although equivalent expressions may have different implications (e.g., every 8 hours versus 3 times a day).
- Duration: for non-instantaneous administrations, indicates the length of time the administration should be continued. For example, (infuse) over 30 minutes.

16. [CCD] **CONF-312: MAY** contain [0..1] `maxDoseQuantity`

17. [HITSP] **CONF-309, CONF-310: SHOULD** contain [1..1] `routeCode` (CodeSystem: 2.16.840.1.113883.5.112 HL7 RouteOfAdministration DYNAMIC)

- The route is a coded value, and indicates how the medication is received by the patient (by mouth, intravenously, topically, et cetera).

18. [CCD] **CONF-313: MAY** contain [0..1] `performer`, such that it

a. contains *CDA Performer2*

- Indicates the person administering a substance.

19. [IHE] **MAY** contain [0..*] `approachSiteCode`

- The site where the medication is administered, usually used with IV or topical drugs.

20. [IHE] **SHOULD** contain [0..1] `doseQuantity`

- The amount of the medication given. This should be in some known and measurable unit, such as grams, milligrams, et cetera. It may be measured in "administration" units (such as tablets or each), for medications where the strength is relevant. In this case, only the unit count is specified, no units are specified. It may be a range.

21. [IHE] **SHOULD** contain [0..1] `rateQuantity`

- The rate is a measurement of how fast the dose is given to the patient over time (e.g., .5 liter / 1 hr), and is often used with IV drugs.

22. [CCD] **CONF-305: SHALL** satisfy: Value for `moodCode` is "EVN" or "INT" 2.16.840.1.113883.5.1001 ActMood STATIC

- [OCL]: `self.moodCode=vocab::x_DocumentSubstanceMood::EVN or self.moodCode=vocab::x_DocumentSubstanceMood::INT`

23. [CCD] **CONF-311: SHOULD** satisfy: Contains exactly one `doseQuantity` or `rateQuantity`.

- [OCL]: `not self.doseQuantity.ocIsUndefined() or not self.rateQuantity.ocIsUndefined()`

24. [CCD] **CONF-314: MAY** satisfy: Has one or more associated consents, represented in the CCD Header as ClinicalDocument / authorization / consent.

- [OCL]: `self.getClinicalDocument().authorization->exists(auth : cda::Authorization | not auth.ocIsUndefined() and not auth.consent.ocIsUndefined())`

25. [CCD] **CONF-315: SHALL** satisfy: Contains one or more sources of information.

- [OCL]: `not self.informant->isEmpty() or not self.getSection().informant->isEmpty() or not self.getClinicalDocument().informant->isEmpty() or self.reference->exists(ref : cda::Reference | ref.typeCode = vocab::x_ActRelationshipExternalReference::XCRPT) or (self.entryRelationship->exists(rel : cda::EntryRelationship | rel.typeCode = vocab::x_ActRelationshipEntryRelationship::REFR and rel.observation.code.code = '48766-0'))`

26. [CCD] **CONF-327: MAY** satisfy: Contains one or more precondition / Criterion, to indicate that the medication is administered only when the associated (coded or free text) criteria are met.

- Indicates that the medication is administered only when the associated (coded or free text) criteria are met.
 - [OCL]: `self.precondition->exists(precondition : cda::Precondition | not precondition.criterion.ocIsUndefined())`
27. [CCD] **CONF-328: MAY** satisfy: Contains one or more entryRelationship, where the value for @typeCode is "RSON" "Has reason" 2.16.840.1.113883.5.1002 ActRelationshipType STATIC.
- The target of the relationship represents the indication for the activity.
 - [OCL]: `self.entryRelationship->exists(entryRel : cda::EntryRelationship | entryRel.typeCode = vocab::x_ActRelationshipEntryRelationship::RSON)`
28. [CCD] **CONF-329: SHALL** satisfy: entryRelationship / @typeCode="RSON" in a medication activity has a target of problem act, problem observation, or some other clinical statement.
- [OCL]:
`self.getEntryRelationshipTargets(vocab::x_ActRelationshipEntryRelationship::RSON, cda::ClinicalStatement)->forall(target : cda::ClinicalStatement | not target.ocIsUndefined() and (target.ocIsKindOf(ccd::ProblemAct) or target.ocIsKindOf(ccd::ProblemObservation)))`
29. [IHE] **SHALL** satisfy: Contains the consumable name. If the name of the medication is unknown, the type, purpose or other description may be supplied.
- The name of the substance or product. This should be sufficient for a provider to identify the kind of medication. It may be a trade name or a generic name. This information is required in all medication entries. If the name of the medication is unknown, the type, purpose or other description may be supplied. The name should not include packaging, strength or dosing information. Note: Due to restrictions of the CDA schema, there is no way to explicitly link the name to the narrative text.
 - [OCL]: `not self.consumable.manufacturedProduct.manufacturedLabeledDrug.name.ocIsUndefined() or not self.consumable.manufacturedProduct.manufacturedMaterial.name.ocIsUndefined()`
30. [HITSP] **SHALL** satisfy: The time at which the medication was stopped is determined based on the content of the <high> element of the first <effectiveTime> element.
31. [HITSP] **SHALL** satisfy: The HL7 data type for PIVL_TS uses the institutionSpecified attribute to indicate whether it is the interval (time between dosing), or frequency (number of doses in a time period) that is important. If institutionSpecified is not present or is set to false, then the time between dosing is important (every 8 hours). If true, then the frequency of administration is important (e.g., 3 times per day).
32. [HITSP] **C83-[DE-8-CDA-3]: SHALL** satisfy: The first <effectiveTime> SHALL use the IVL_TS data type unless for a single administration, in which case, it SHALL use the TS data type.
33. [HITSP] **C83-[DE-8.03-CDA-1]: SHALL** satisfy: Medications that are administered based on activities of daily living SHALL identify the events that trigger administration in the <event> element beneath the <effectiveTime> element. The <effectiveTime> element SHALL be of type EIVL_TS.
34. [HITSP] **C83-[DE-8.04-CDA-1]: SHALL** satisfy: Medications that are administered at a specified frequency SHALL record the expected interval between doses in the <period> element beneath an <effectiveTime> of type PIVL_TS. The <effectiveTime> element SHALL have an institutionSpecified attribute value of "true".
35. [HITSP] **C83-[DE-8.05-CDA-1]: SHALL** satisfy: Medications that are administered at a specified interval SHALL record interval between doses in the <period> element beneath an <effectiveTime> element of type PIVL_TS. The <effectiveTime> element SHALL have an institutionSpecified attribute value of "false".

 - Indicate Medication Stopped: Used to express a "hard stop," such as the last Sig sequence in a tapering dose, where the last sequence is 'then D/C' or where the therapy/drug is used to treat a condition and that treatment is for a fixed duration with a hard stop, such as antibiotic treatment, etc.
 - Administration Timing: defines a specific administration or use time. Can be a text string (Morning, Evening, Before Meals, 1 Hour After Meals, 3 Hours After Meals, Before Bed) or an exact time.

- Frequency: defines how often the medication is to be administered as events per unit of time. Often expressed as the number of times per day (e.g., four times a day), but may also include event-related information (e.g., 1 hour before meals, in the morning, at bedtime). Complimentary to Interval, although equivalent expressions may have different implications (e.g., every 8 hours versus 3 times a day).
- Interval: defines how the product is to be administered as an interval of time. For example, every 8 hours. Complimentary to Frequency, although equivalent expressions may have different implications (e.g., every 8 hours versus 3 times a day).
- Duration: for non-instantaneous administrations, indicates the length of time the administration should be continued. For example, (infuse) over 30 minutes.

16. [CCD] **CONF-312: MAY** contain [0..1] `maxDoseQuantity`

17. [HITSP] **CONF-309, CONF-310: SHOULD** contain [1..1] `routeCode` (CodeSystem: 2.16.840.1.113883.5.112 HL7 RouteOfAdministration DYNAMIC)

- The route is a coded value, and indicates how the medication is received by the patient (by mouth, intravenously, topically, et cetera).

18. [CCD] **CONF-313: MAY** contain [0..1] `performer`, such that it

a. contains *CDA Performer2*

- Indicates the person administering a substance.

19. [IHE] **MAY** contain [0..*] `approachSiteCode`

- The site where the medication is administered, usually used with IV or topical drugs.

20. [IHE] **SHOULD** contain [0..1] `doseQuantity`

- The amount of the medication given. This should be in some known and measurable unit, such as grams, milligrams, et cetera. It may be measured in "administration" units (such as tablets or each), for medications where the strength is relevant. In this case, only the unit count is specified, no units are specified. It may be a range.

21. [IHE] **SHOULD** contain [0..1] `rateQuantity`

- The rate is a measurement of how fast the dose is given to the patient over time (e.g., .5 liter / 1 hr), and is often used with IV drugs.

22. [CCD] **CONF-305: SHALL** satisfy: Value for `moodCode` is "EVN" or "INT" 2.16.840.1.113883.5.1001 ActMood STATIC

- [OCL]: `self.moodCode=vocab::x_DocumentSubstanceMood::EVN or self.moodCode=vocab::x_DocumentSubstanceMood::INT`

23. [CCD] **CONF-311: SHOULD** satisfy: Contains exactly one `doseQuantity` or `rateQuantity`.

- [OCL]: `not self.doseQuantity.ocIsUndefined() or not self.rateQuantity.ocIsUndefined()`

24. [CCD] **CONF-314: MAY** satisfy: Has one or more associated consents, represented in the CCD Header as ClinicalDocument / authorization / consent.

- [OCL]: `self.getClinicalDocument().authorization->exists(auth : cda::Authorization | not auth.ocIsUndefined() and not auth.consent.ocIsUndefined())`

25. [CCD] **CONF-315: SHALL** satisfy: Contains one or more sources of information.

- [OCL]: `not self.informant->isEmpty() or not self.getSection().informant->isEmpty() or not self.getClinicalDocument().informant->isEmpty() or self.reference->exists(ref : cda::Reference | ref.typeCode = vocab::x_ActRelationshipExternalReference::XCRPT) or (self.entryRelationship->exists(rel : cda::EntryRelationship | rel.typeCode = vocab::x_ActRelationshipEntryRelationship::REFR and rel.observation.code.code = '48766-0'))`

26. [CCD] **CONF-327: MAY** satisfy: Contains one or more precondition / Criterion, to indicate that the medication is administered only when the associated (coded or free text) criteria are met.

- Indicates that the medication is administered only when the associated (coded or free text) criteria are met.
 - [OCL]: `self.precondition->exists(precondition : cda::Precondition | not precondition.criterion.ocIsUndefined())`
27. [CCD] **CONF-328: MAY** satisfy: Contains one or more entryRelationship, where the value for @typeCode is "RSON" "Has reason" 2.16.840.1.113883.5.1002 ActRelationshipType STATIC.
- The target of the relationship represents the indication for the activity.
 - [OCL]: `self.entryRelationship->exists(entryRel : cda::EntryRelationship | entryRel.typeCode = vocab::x_ActRelationshipEntryRelationship::RSON)`
28. [CCD] **CONF-329: SHALL** satisfy: entryRelationship / @typeCode="RSON" in a medication activity has a target of problem act, problem observation, or some other clinical statement.
- [OCL]:
`self.getEntryRelationshipTargets(vocab::x_ActRelationshipEntryRelationship::RSON, cda::ClinicalStatement)->forall(target : cda::ClinicalStatement | not target.ocIsUndefined() and (target.ocIsKindOf(ccd::ProblemAct) or target.ocIsKindOf(ccd::ProblemObservation)))`
29. [IHE] **SHALL** satisfy: Contains the consumable name. If the name of the medication is unknown, the type, purpose or other description may be supplied.
- The name of the substance or product. This should be sufficient for a provider to identify the kind of medication. It may be a trade name or a generic name. This information is required in all medication entries. If the name of the medication is unknown, the type, purpose or other description may be supplied. The name should not include packaging, strength or dosing information. Note: Due to restrictions of the CDA schema, there is no way to explicitly link the name to the narrative text.
 - [OCL]: `not self.consumable.manufacturedProduct.manufacturedLabeledDrug.name.ocIsUndefined() or not self.consumable.manufacturedProduct.manufacturedMaterial.name.ocIsUndefined()`
30. [HITSP] **SHALL** satisfy: The time at which the medication was stopped is determined based on the content of the <high> element of the first <effectiveTime> element.
31. [HITSP] **SHALL** satisfy: The HL7 data type for PIVL_TS uses the institutionSpecified attribute to indicate whether it is the interval (time between dosing), or frequency (number of doses in a time period) that is important. If institutionSpecified is not present or is set to false, then the time between dosing is important (every 8 hours). If true, then the frequency of administration is important (e.g., 3 times per day).
32. [HITSP] **C83-[DE-8-CDA-3]: SHALL** satisfy: The first <effectiveTime> SHALL use the IVL_TS data type unless for a single administration, in which case, it SHALL use the TS data type.
33. [HITSP] **C83-[DE-8.03-CDA-1]: SHALL** satisfy: Medications that are administered based on activities of daily living SHALL identify the events that trigger administration in the <event> element beneath the <effectiveTime> element. The <effectiveTime> element SHALL be of type EIVL_TS.
34. [HITSP] **C83-[DE-8.04-CDA-1]: SHALL** satisfy: Medications that are administered at a specified frequency SHALL record the expected interval between doses in the <period> element beneath an <effectiveTime> of type PIVL_TS. The <effectiveTime> element SHALL have an institutionSpecified attribute value of "true".
35. [HITSP] **C83-[DE-8.05-CDA-1]: SHALL** satisfy: Medications that are administered at a specified interval SHALL record interval between doses in the <period> element beneath an <effectiveTime> element of type PIVL_TS. The <effectiveTime> element SHALL have an institutionSpecified attribute value of "false".

Figure 46: Medication Split Dose example

Medication Tapered Dose

[SubstanceAdministration: templateId null]

1. Conforms to *IHE Tapered Dose* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.8)
2. Conforms to *CDA Clinical Statement*
3. Conforms to *CDA Substance Administration*
4. Conforms to *CCD Medication Activity* template (templateId: 2.16.840.1.113883.10.20.1.24)
5. Conforms to *IHE Medication* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.7)
6. Conforms to *Medication* template (templateId: 2.16.840.1.113883.3.88.11.83.8)
7. [CDA] Contains [1..1] @classCode = "SBADM", where its data type is ActClass
8. [CDA] Contains [1..1] @moodCode, where its data type is x_DocumentSubstanceMood
9. [CDA] Contains [1..1] consumable, where its type is *CDA Consumable*
10. [CCD] **CONF-306: SHALL** contain [1..*] id
11. [CCD] **CONF-307: SHOULD** contain [1..1] statusCode
12. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. contains *CCD Medication Series Number Observation* (templateId: 2.16.840.1.113883.10.20.1.46)
13. [CCD] **MAY** contain [0..1] entryRelationship, such that it
 - a. contains *CCD Medication Status Observation* (templateId: 2.16.840.1.113883.10.20.1.47)
14. [CCD] **CONF-330, CONF-333: MAY** contain [1..*] entryRelationship, such that it
 - a. has @typeCode="SUBJ" *SUBJ* (has subject)
 - b. contains *CCD Patient Instruction* (templateId: 2.16.840.1.113883.10.20.1.49)
15. [HITSP] **CONF-308: SHOULD** contain [1..*] effectiveTime
 - Indicate Medication Stopped: Used to express a "hard stop," such as the last Sig sequence in a tapering dose, where the last sequence is 'then D/C' or where the therapy/drug is used to treat a condition and that treatment is for a fixed duration with a hard stop, such as antibiotic treatment, etc.
 - Administration Timing: defines a specific administration or use time. Can be a text string (Morning, Evening, Before Meals, 1 Hour After Meals, 3 Hours After Meals, Before Bed) or an exact time.

- Frequency: defines how often the medication is to be administered as events per unit of time. Often expressed as the number of times per day (e.g., four times a day), but may also include event-related information (e.g., 1 hour before meals, in the morning, at bedtime). Complimentary to Interval, although equivalent expressions may have different implications (e.g., every 8 hours versus 3 times a day).
- Interval: defines how the product is to be administered as an interval of time. For example, every 8 hours. Complimentary to Frequency, although equivalent expressions may have different implications (e.g., every 8 hours versus 3 times a day).
- Duration: for non-instantaneous administrations, indicates the length of time the administration should be continued. For example, (infuse) over 30 minutes.

16. [CCD] **CONF-312: MAY** contain [0..1] `maxDoseQuantity`

17. [HITSP] **CONF-309, CONF-310: SHOULD** contain [1..1] `routeCode` (CodeSystem: 2.16.840.1.113883.5.112 HL7 RouteOfAdministration DYNAMIC)

- The route is a coded value, and indicates how the medication is received by the patient (by mouth, intravenously, topically, et cetera).

18. [CCD] **CONF-313: MAY** contain [0..1] `performer`, such that it

a. contains *CDA Performer2*

- Indicates the person administering a substance.

19. [IHE] **MAY** contain [0..*] `approachSiteCode`

- The site where the medication is administered, usually used with IV or topical drugs.

20. [IHE] **SHOULD** contain [0..1] `doseQuantity`

- The amount of the medication given. This should be in some known and measurable unit, such as grams, milligrams, et cetera. It may be measured in "administration" units (such as tablets or each), for medications where the strength is relevant. In this case, only the unit count is specified, no units are specified. It may be a range.

21. [IHE] **SHOULD** contain [0..1] `rateQuantity`

- The rate is a measurement of how fast the dose is given to the patient over time (e.g., .5 liter / 1 hr), and is often used with IV drugs.

22. [CCD] **CONF-305: SHALL** satisfy: Value for `moodCode` is "EVN" or "INT" 2.16.840.1.113883.5.1001 ActMood STATIC

- [OCL]: `self.moodCode=vocab::x_DocumentSubstanceMood::EVN or self.moodCode=vocab::x_DocumentSubstanceMood::INT`

23. [CCD] **CONF-311: SHOULD** satisfy: Contains exactly one `doseQuantity` or `rateQuantity`.

- [OCL]: `not self.doseQuantity.ocIsUndefined() or not self.rateQuantity.ocIsUndefined()`

24. [CCD] **CONF-314: MAY** satisfy: Has one or more associated consents, represented in the CCD Header as ClinicalDocument / authorization / consent.

- [OCL]: `self.getClinicalDocument().authorization->exists(auth : cda::Authorization | not auth.ocIsUndefined() and not auth.consent.ocIsUndefined())`

25. [CCD] **CONF-315: SHALL** satisfy: Contains one or more sources of information.

- [OCL]: `not self.informant->isEmpty() or not self.getSection().informant->isEmpty() or not self.getClinicalDocument().informant->isEmpty() or self.reference->exists(ref : cda::Reference | ref.typeCode = vocab::x_ActRelationshipExternalReference::XCRPT) or (self.entryRelationship->exists(rel : cda::EntryRelationship | rel.typeCode = vocab::x_ActRelationshipEntryRelationship::REFR and rel.observation.code.code = '48766-0'))`

26. [CCD] **CONF-327: MAY** satisfy: Contains one or more precondition / Criterion, to indicate that the medication is administered only when the associated (coded or free text) criteria are met.

- Indicates that the medication is administered only when the associated (coded or free text) criteria are met.
 - [OCL]: `self.precondition->exists(precondition : cda::Precondition | not precondition.criterion.oclIsUndefined())`
27. [CCD] **CONF-328: MAY** satisfy: Contains one or more entryRelationship, where the value for @typeCode is "RSON" "Has reason" 2.16.840.1.113883.5.1002 ActRelationshipType STATIC.
- The target of the relationship represents the indication for the activity.
 - [OCL]: `self.entryRelationship->exists(entryRel : cda::EntryRelationship | entryRel.typeCode = vocab::x_ActRelationshipEntryRelationship::RSON)`
28. [CCD] **CONF-329: SHALL** satisfy: entryRelationship / @typeCode="RSON" in a medication activity has a target of problem act, problem observation, or some other clinical statement.
- [OCL]:
`self.getEntryRelationshipTargets(vocab::x_ActRelationshipEntryRelationship::RSON, cda::ClinicalStatement)->forall(target : cda::ClinicalStatement | not target.oclIsUndefined() and (target.oclIsKindOf(ccd::ProblemAct) or target.oclIsKindOf(ccd::ProblemObservation)))`
29. [IHE] **SHALL** satisfy: Contains the consumable name. If the name of the medication is unknown, the type, purpose or other description may be supplied.
- The name of the substance or product. This should be sufficient for a provider to identify the kind of medication. It may be a trade name or a generic name. This information is required in all medication entries. If the name of the medication is unknown, the type, purpose or other description may be supplied. The name should not include packaging, strength or dosing information. Note: Due to restrictions of the CDA schema, there is no way to explicitly link the name to the narrative text.
 - [OCL]: `not self.consumable.manufacturedProduct.manufacturedLabeledDrug.name.oclIsUndefined() or not self.consumable.manufacturedProduct.manufacturedMaterial.name.oclIsUndefined()`
30. [HITSP] **SHALL** satisfy: The time at which the medication was stopped is determined based on the content of the <high> element of the first <effectiveTime> element.
31. [HITSP] **SHALL** satisfy: The HL7 data type for PIVL_TS uses the institutionSpecified attribute to indicate whether it is the interval (time between dosing), or frequency (number of doses in a time period) that is important. If institutionSpecified is not present or is set to false, then the time between dosing is important (every 8 hours). If true, then the frequency of administration is important (e.g., 3 times per day).
32. [HITSP] **C83-[DE-8-CDA-3]: SHALL** satisfy: The first <effectiveTime> SHALL use the IVL_TS data type unless for a single administration, in which case, it SHALL use the TS data type.
33. [HITSP] **C83-[DE-8.03-CDA-1]: SHALL** satisfy: Medications that are administered based on activities of daily living SHALL identify the events that trigger administration in the <event> element beneath the <effectiveTime> element. The <effectiveTime> element SHALL be of type EIVL_TS.
34. [HITSP] **C83-[DE-8.04-CDA-1]: SHALL** satisfy: Medications that are administered at a specified frequency SHALL record the expected interval between doses in the <period> element beneath an <effectiveTime> of type PIVL_TS. The <effectiveTime> element SHALL have an institutionSpecified attribute value of "true".
35. [HITSP] **C83-[DE-8.05-CDA-1]: SHALL** satisfy: Medications that are administered at a specified interval SHALL record interval between doses in the <period> element beneath an <effectiveTime> element of type PIVL_TS. The <effectiveTime> element SHALL have an institutionSpecified attribute value of "false".

Figure 47: Medication Tapered Dose example

Procedure

[Procedure: templateId 2.16.840.1.113883.3.88.11.83.17]

Defines a coded entry describing a procedure performed on a patient.

1. Conforms to *IHE Procedure Entry* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.19)
2. Conforms to *CCD Procedure Activity*
3. Conforms to *CDA Clinical Statement*
4. Conforms to *CDA Procedure*
5. Conforms to *CCD Procedure Activity Procedure* template (templateId: 2.16.840.1.113883.10.20.1.29)
6. Conforms to *IHE Procedure Entry Procedure Activity Procedure* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.19)
7. [CDA] Contains [1..1] @classCode, where its data type is ActClass
8. [CDA] Contains [1..1] @moodCode, where its data type is x_DocumentProcedureMood
9. [IHE] **SHALL** contain [1..*] id
10. [IHE] **SHALL** contain [1..1] statusCode
 - The <statusCode> element shall be present when used to describe a procedure event. It shall have the value 'completed' for procedures that have been completed, and 'active' for procedures that are still in progress. Procedures that were stopped prior to completion shall use the value 'aborted', and procedures that were cancelled before being started shall use the value 'cancelled'.
11. [IHE] **SHOULD** contain [1..1] effectiveTime
12. [IHE] **SHALL** contain [1..1] code
 - Contains a code describing the type of procedure.
13. [IHE] **MAY** contain [0..*] approachSiteCode
 - This element may be present to indicate the procedure approach.
14. [HITSP] **C83-[DE-17-CDA-3]: SHOULD** contain [1..1] targetSiteCode, which **SHOULD** be selected from ValueSet 2.16.840.1.113883.3.88.12.3221.8.9 Body Site Value Set STATIC 2

15. [IHE] **SHALL** contain [1..1] text
16. [IHE] **SHALL** satisfy: The <text> element shall contain a reference to the narrative text describing the procedure.
 - [OCL]: not self.text.reference.ocIsUndefined()
17. [IHE] **MAY** satisfy: entryRelationship with typeCode='COMP' may be present to point to the encounter in which the procedure was performed, and shall contain an internal reference to the encounter.
18. [IHE] **MAY** satisfy: entryRelationship with typeCode='RSON' may be present. A <procedure> act may indicate one or more reasons for the procedure. These reasons identify the concern that was the reason for the procedure via an Internal Reference to the concern. The extension and root of each observation present must match the identifier of a concern entry contained elsewhere within the CDA document.
19. [HITSP] **SHOULD** satisfy: The code/@code attribute is present.
 - [OCL]: not self.code.code.ocIsUndefined()
20. [HITSP] **SHALL** satisfy: The code/originalText/reference/@value is present.
 - [OCL]: not self.code.originalText.reference.value.ocIsUndefined()
21. [HITSP] **SHOULD** satisfy: Contains the procedure provider in performer / assignedEntity.
 - [OCL]: self.performer->forall(perf : cda::Performer2 | not perf.ocIsUndefined() and perf.assignedEntity->size() > 0)

Figure 48: Procedure example

Result

[Observation: templateId 2.16.840.1.113883.3.88.11.83.15]

This module contains current and relevant historical result observations for the patient. The scope of "observations" is broad with the exception of "vital signs" which are contained in the Vital Signs section.

1. Conforms to *IHE Simple Observation* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.13)

2. Conforms to *CDA Clinical Statement*
3. Conforms to *CDA Observation*
4. Conforms to *CCD Result Observation* template (templateId: 2.16.840.1.113883.10.20.1.31)
5. [CDA] Contains [1..1] @classCode, where its data type is ActClassObservation
6. [CCD] **CONF-408: SHALL** contain [1..1] @moodCode = "EVN"
7. [CCD] **CONF-409: SHALL** contain [1..*] id
8. [CCD] **CONF-410: SHALL** contain [1..1] statusCode
9. [HITSP] **SHALL** contain [1..1] code
10. [HITSP] **SHALL** contain [1..1] effectiveTime
11. [CCD] **CONF-414: MAY** contain [0..1] methodCode
 - Included if the method isn't inherent in code or if there is a need to further specialize the method in code.
12. [CCD] **CONF-418: SHOULD** contain [0..*] interpretationCode
 - Can be used to provide a rough qualitative interpretation of the observation, such as 'N' (normal), 'L' (low), 'S' (susceptible), etc. Interpretation is generally provided for numeric results where an interpretation range has been defined, or for antimicrobial susceptibility test interpretation.
13. [HITSP] **SHALL** contain [1..1] value
 - The Result value records the desired result in a goal or recorded event, and will not present when recording an intent, request or proposal to measure a result.
14. [CCD] **CONF-413: SHOULD** satisfy: The value for 'code' SHOULD be selected from LOINC (codeSystem 2.16.840.1.113883.6.1) or SNOMED CT (codeSystem 2.16.840.1.113883.6.96), and MAY be selected from CPT-4 (codeSystem 2.16.840.1.113883.6.12).
15. [CCD] **CONF-415: SHALL** satisfy: The methodCode SHALL NOT conflict with the method inherent in code
16. [CCD] **CONF-417: SHALL** satisfy: Where value is a physical quantity, the unit of measure SHALL be expressed using a valid Unified Code for Units of Measure (UCUM) expression.
17. [CCD] **CONF-419: SHOULD** satisfy: Contain one or more referenceRange to show the normal range of values for the observation result
 - [OCL]: `not self.referenceRange->isEmpty()`
18. [CCD] **CONF-420: SHALL** satisfy: SHALL NOT contain referenceRange / observationRange / code, as this attribute is not used by the HL7 Clinical Statement or Lab Committee models.
 - [OCL]: `self.referenceRange->forAll(range : cda::ReferenceRange | range.observationRange.code.code.ocIsUndefined())`
19. [CCD] **CONF-421: SHALL** satisfy: Contains one or more sources of information.
 - [OCL]: `not self.informant->isEmpty()
or not self.getSection().informant->isEmpty()
or not self.getClinicalDocument().informant->isEmpty()
or self.reference->exists(ref : cda::Reference | ref.typeCode =
vocab::x_ActRelationshipExternalReference::XCRPT)
or (self.entryRelationship->exists(rel : cda::EntryRelationship |
rel.typeCode = vocab::x_ActRelationshipEntryRelationship::REFR
and rel.observation.code.code = '48766-0'))`
20. [HITSP] **C154-[DE-15.03-1]: SHOULD** satisfy: Result Type SHOULD be selected from LOINC (codeSystem 2.16.840.1.113883.6.1) or SNOMED CT (codeSystem 2.16.840.1.113883.6.96)
21. [HITSP] **C154-[DE-15.03-2]: SHOULD** satisfy: Result Type for laboratory results SHOULD be coded as specified in HITSP/C80 Section 2.2.3.6.1 Laboratory Observations.
22. [HITSP] **C83-[DE-15.05-CDA-1]: SHALL** satisfy: Result Value SHALL be present when the observation/@moodCode is EVN or GOL, and SHALL NOT be present when observation/@moodCode is INT or PRP.
 - [OCL]: `(self.moodCode = vocab::x_ActMoodDocumentObservation::EVN or
self.moodCode = vocab::x_ActMoodDocumentObservation::EVN)
implies (not self.value->isEmpty()) and
(self.moodCode = vocab::x_ActMoodDocumentObservation::INT or
self.moodCode = vocab::x_ActMoodDocumentObservation::PRP)
implies (self.value->isEmpty())`

Figure 49: Result example

Vital Sign

[Observation: templateId 2.16.840.1.113883.3.88.11.83.14]

1. Conforms to *IHE Simple Observation* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.13)
2. Conforms to *CDA Clinical Statement*
3. Conforms to *CDA Observation*
4. Conforms to *CCD Result Observation* template (templateId: 2.16.840.1.113883.10.20.1.31)
5. Conforms to *IHE Vital Sign Observation* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.13.2)
6. [CDA] Contains [1..1] @classCode, where its data type is ActClassObservation
7. [CCD] **CONF-408: SHALL** contain [1..1] @moodCode = "EVN"
8. [CCD] **CONF-409: SHALL** contain [1..*] id
9. [IHE] Contains [1..1] statusCode
 - The observations have all been completed.
10. [HITSP] **SHALL** contain [1..1] code, which **SHALL** be selected from ValueSet 2.16.840.1.113883.3.88.12.80.62 Vital Sign Result Value Set STATIC 1
11. [CCD] **CONF-411: SHOULD** contain [1..1] effectiveTime
 - Represents the biologically relevant time (e.g. time the specimen was obtained from the patient).
12. [IHE] **MAY** contain [0..*] methodCode
 - The method code element may be present to indicate the method used to obtain the measure. Note that method used is distinct from, but possibly related to the target site.
13. [IHE] **MAY** contain [0..*] interpretationCode

- The interpretation code may be present to provide an interpretation of the vital signs measure (e.g., High, Normal, Low, et cetera).

14. [IHE] **SHALL** contain [1..1] value, where its data type is PQ

15. [IHE] **MAY** contain [0..*] targetSiteCode

- The target site of the measure may be identified in the targetSiteCode element (e.g., Left arm [blood pressure], oral [temperature], et cetera).

16. [CCD] **CONF-413: SHOULD** satisfy: The value for 'code' **SHOULD** be selected from LOINC (codeSystem 2.16.840.1.113883.6.1) or SNOMED CT (codeSystem 2.16.840.1.113883.6.96), and **MAY** be selected from CPT-4 (codeSystem 2.16.840.1.113883.6.12).

17. [CCD] **CONF-415: SHALL** satisfy: The methodCode **SHALL NOT** conflict with the method inherent in code

18. [CCD] **CONF-417: SHALL** satisfy: Where value is a physical quantity, the unit of measure **SHALL** be expressed using a valid Unified Code for Units of Measure (UCUM) expression.

19. [CCD] **CONF-419: SHOULD** satisfy: Contain one or more referenceRange to show the normal range of values for the observation result

- [OCL]: `not self.referenceRange->isEmpty()`

20. [CCD] **CONF-420: SHALL** satisfy: **SHALL NOT** contain referenceRange / observationRange / code, as this attribute is not used by the HL7 Clinical Statement or Lab Committee models.

- [OCL]: `self.referenceRange->forAll(range : cda::ReferenceRange | range.observationRange.code.code.ocIsUndefined())`

21. [CCD] **CONF-421: SHALL** satisfy: Contains one or more sources of information.

- [OCL]: `not self.informant->isEmpty()`
`or not self.getSection().informant->isEmpty()`
`or not self.getClinicalDocument().informant->isEmpty()`
`or self.reference->exists(ref : cda::Reference | ref.typeCode =`
`vocab::x_ActRelationshipExternalReference::XCRPT)`
`or (self.entryRelationship->exists(rel : cda::EntryRelationship |`
`rel.typeCode = vocab::x_ActRelationshipEntryRelationship::REFR`
`and rel.observation.code.code = '48766-0'))`

Chapter

5

OTHER CLASSES

Topics:

- *Healthcare Provider*
- *Language Spoken*
- *Medication Information*
- *Support*
- *Support Guardian*
- *Support Participant*

This section of the Implementation Guide describes other classes that are not CDA Clinical Documents, Sections, or Clinical Statements.

Healthcare Provider

[Performer1: templateId 2.16.840.1.113883.3.88.11.83.4]

1. Conforms to *CDA Performer1*
2. Conforms to *IHE Healthcare Providers Pharmacies* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.2.3)
3. [CDA] Contains [1..1] @typeCode, where its data type is x_ServiceEventPerformer
4. [CDA] Contains [1..1] assignedEntity, where its type is *CDA Assigned Entity*

Figure 51: Healthcare Provider example

Language Spoken

[LanguageCommunication: templateId 2.16.840.1.113883.3.88.11.83.2]

1. Conforms to *CDA Language Communication*
2. Conforms to *IHE Language Communication* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.2.1)
3. [HITSP] **C154-[DE-2.01-1]: SHALL** contain [1..1] languageCode, which **SHALL** be selected from ValueSet 2.16.840.1.113883.1.11.11526 Language DYNAMIC 200609
4. [HITSP] **C83-[DE-2.01-CDA-4]: SHALL** contain [0..1] modeCode, which **SHALL** be selected from ValueSet 2.16.840.1.113883.1.11.12249 LanguageAbilityMode Value Set STATIC 1
 - Mode codes SHALL be appropriate to the type of language. Thus English, as spoken in the U.S. SHOULD use the code en-US and SHOULD only use mode codes for written and verbal communications. On the other hand, American Sign Language would be represented using the code sign-US, and would only use mode codes for signed communication.
5. [HITSP] **C83-[DE-2.01-CDA-1]: SHALL** satisfy: Languages spoken shall be recorded using the <languageCommunication> infrastructure class associated with the patient. The <languageCommunication> element describes the primary and secondary languages of communication for a person.
6. [HITSP] **C154-[DE-2.01-2]: SHALL** satisfy: Sign language is treated as a separate language.
7. [HITSP] **C83-[DE-2.01-CDA-5]: SHOULD** satisfy: CDA allows for use of proficiencyLevelCode element, but this element SHOULD NOT be used.
 - Judgments about language proficiency are subjective, and could have a negative impact on consumers.
 - [OCL]: `self.proficiencyLevelCode.ocIsUndefined()`

Figure 52: Language Spoken example

Medication Information

[ManufacturedProduct: templateId 2.16.840.1.113883.3.88.11.83.8.2]

1. Conforms to *CDA Manufactured Product*
2. Conforms to *CCD Product* template (templateId: 2.16.840.1.113883.10.20.1.53)
3. Conforms to *IHE Product Entry* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.7.2)
4. [CDA] **SHALL** satisfy: manufacturedDrugOrOtherMaterial
 - [OCL]: `self.manufacturedLabeledDrug.ocIsUndefined() xor self.manufacturedMaterial.ocIsUndefined()`

Figure 53: Medication Information example

Support

At a minimum, key support contacts relative to healthcare decisions, including next of kin, should be included. If no healthcare providers are supplied, the reason should be supplied as free text in the narrative block (e.g., Unknown, etc).

1. Conforms to [CCD Support](#)
2. Conforms to [IHE Patient Contact](#)
- 3.

Figure 54: Support example

Support Guardian

[Guardian: templateId 2.16.840.1.113883.3.88.11.83.3]

At a minimum, key support contacts relative to healthcare decisions, including next of kin, should be included. If no healthcare providers are supplied, the reason should be supplied as free text in the narrative block (e.g., Unknown, etc).

1. Conforms to [Support](#)
2. Conforms to [IHE Patient Contact](#)
3. Conforms to [CCD Support](#)
4. Conforms to [CDA Guardian](#)
5. Conforms to [CCD Support Guardian](#)
6. Conforms to [IHE Patient Contact Guardian](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.2.4)
7. [IHE] **SHALL** contain [1..1] @classCode = "GUAR"
8. [IHE] **SHOULD** contain [0..*] addr
9. [IHE] **SHALL** contain [0..1] code (CodeSystem: 2.16.840.1.113883.5.111 RoleCode STATIC)
10. [IHE] **SHOULD** contain [0..*] telecom
11. [CDA] **SHALL** satisfy: guardianChoice
 - [OCL]: `self.guardianPerson.ocIsUndefined() xor self.guardianOrganization.ocIsUndefined()`

Figure 55: Support Guardian example

Support Participant

[Participant1: templateId 2.16.840.1.113883.3.88.11.83.3]

At a minimum, key support contacts relative to healthcare decisions, including next of kin, should be included. If no healthcare providers are supplied, the reason should be supplied as free text in the narrative block (e.g., Unknown, etc).

1. Conforms to [Support](#)
2. Conforms to [IHE Patient Contact](#)
3. Conforms to [CCD Support](#)
4. Conforms to [CDA Participant1](#)
5. Conforms to [CCD Support Participant](#)
6. Conforms to [IHE Patient Contact Participant](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.2.4)
7. [IHE] **SHALL** contain [1..1] @typeCode = "IND"

8. [CDA] Contains [1..1] `associatedEntity`, where its type is *CDA Associated Entity*
9. [IHE] **MAY** contain [0..1] `time`
 - Indicates the time of the participation.

Figure 56: Support Participant example

Chapter 6
